Index

Α

Adhesion, 331, 345 Alluvial deposits, 5 AASHTO classification system, 11, 20, 21, 22, 23, 24 Anchored bulkheads, 457 Angle of internal friction, 42, 65 Angle of wall friction, 414 Answers to selected problems, 495 Atterberg limits, 16 Auger borings, 49

B

Bearing capacity, 282 allowable, 282 of drilled shafts, 386 of footings, 282 eccentric load on, 298 effect of water table on, 292 inclined loads on, 296 on slopes, 301 ultimate, 282 Bearing capacity factors, 283 Bishop's simplified method of slices, 489 Borings, 49 auger, 49 core, 50, 52 depth, 53, 54 log and record for, 80, 82 number of, 53 rock core, 52 soil profiles from, 83 spacing of, 53 test pits, 49 types of, 49 Boussinesq equation, 151 Braced sheetings, 426

С

Capillarity, 39 Capillary rise in soil, 135 Clay, 10 normally consolidated, 192 consolidated undrained shear, 267

drained shear, 266 field consolidation line for, 195 undrained shear, 270 overconsolidated, 193 shear strength of, 271 Coarse-grained soil, 9 Coefficient of active earth pressure, 397 of compressibility, 209 of consolidation, 208 of curvature, 29 of earth pressure at rest, 398 of friction, 42 between sand and base of retaining wall, 440 between sand and piles, 336 of passive earth pressure, 397 of permeability, 121 field test for, 127 laboratory test for, 122 of secondary compression, 222 of uniformity, 29 Cohesion, 42 Cohesionless soil, 9 settlement of loads on, 224 shear strength of, 226 Cohesive soil, 226 drilled shafts in, 387 settlement of loads on, 199, 221 shear strength of, 266 Compaction, 85 dynamic, 99 field, 94 field control of, 109 laboratory test, 86 vibroflotation, 97 Compactness, 42 Components of soil, 31 Compressibility, 40 coefficient of, 209 Compression index, 197 Cone penetration test (CPT), 64 Consistency of soils, 16 Consolidated drained shear test, 258 Consolidated undrained shear test, 258 Consolidation of soil, 177 coefficient of, 184 primary, 199 secondary, 178

Consolidation of soil (Continued) settlement, 208, 221 test for, 181 time factor, 210 time of, 208 Consolidometer, 182 Contact pressure, 311 for footing, 311 for retaining wall, 441 Converse-Labarre equation, 362 Core borings, 50 Core recovery, 52 Coulomb equation, 42 Coulomb theory for earth pressure, 412 Culmann method for slope stability, 472 Culmann's graphic solution, 420

D

Danish formula, 351 Darcy's law, 120 Dead load, 278 Degree of consolidation, 210 Degree of saturation, 32 Deviator stress at failure, 252 Differential settlement, 323 Direct shear test, 248 Drainage of retaining walls, 449 Dry unit mass, 32 Dry unit weight, 32 maximum, 87 at zero air void, 88 Dynamic compaction, 99

Ε

Earth pressure, 397 active, 397 on braced sheetings, 426 Coulomb theory for, 412 Culmann's graphic solution for, 420 effect of surcharge load on, 418 from graphs or tables, 438, 439 lateral, 397 load on foundation, 278 passive, 397 Rankine theory of, 405 at rest, 398 Earthquake forces, 279 Eccentric loads, 298 Effective intergranular normal pressure, 42 Efficiency of pile groups, 360 block capacity, 363 Converse-Labarre equation, 362

Elastic theory method (stress distribution), 156 Electrical resistivity method, 76 Engineering-News formula, 350

F

Factor of safety against bearing capacity failure, 282 of drilled shafts, 388 of footings, 282 against overturning, 441 of piles, 338 of retaining walls, 441 against sliding, 441 of slope stability, 478 Failure envelope, 262 Failure plane, 260 characteristics of, 260 Field compaction, 94 control, 109 Field consolidation line, 195 for normally consolidated clay, 196 for overconsolidated clay, 196 Fine-grained soils, 9 Floodplain deposits, 6 Flow nets, 138 construction of, 139 Flow of water in soil, 119 Footings bearing capacity of, 282 classification of, 272 combined, 272 contact pressure for, 311 continuous, 276 depth of, 279 design of, 323 eccentrically loaded, 298 factor of safety, 282 inclined load on, 296 individual, 275 loads on, 278 location of, 279 settlement of, 208, 221, 224 size of, 306 on slope, 301 strap, 276 structural design, 323 wall, 276 Foundations deep, 329, 385 depth of, 279 loads on, 278 dead load, 278 earth pressure, 279

Index

earthquake forces, 279 live, 278 snow, 278 water pressure, 279 wind, 278 location of, 279 mat, 277 pile, 329 raft, 276 shallow, 275 Frost action in soil, 138, 280 Frost heave, 39

G

General shear, 284 Geophysical methods of soil exploration, 73 electrical resistivity method, 76 seismic reflection method, 73 Glacial deposits, 7 Grain-size analysis, 10 Granular soils, 9 Gravel, 9 Gravity deposits, 5 Groundwater, 282 Groundwater table, 57, 292 Group index, 22

I

Igneous rocks, 2 Inclined loads, 296 Influence coefficients for stress distribution in soil, 156, 157, 161, 162, 171, 173 In-place soil unit weight test, 102 Internal friction of soil grains, 41

L

Lateral earth pressure, 397 Levees, 6 Liquid limit, 16 Liquid limit device, 18 Liquid state, 17 Liquidity index, 17 Live load, 278 Local shear, 284

Μ

Major principal stress, 253 Maximum dry unit weight, 87 Maximum permissible settlement, 239 Metamorphic rocks, 3 Method of slices, 485 Minor principal stress, 253 Mohr's circle, 262 Mohr's envelope, 254

Ν

Negative skin friction of piles, 360 Newmark influence chart, 173 Normally consolidated clays, 192, 266 consolidated undrained shear, 267 drained shear, 266 field consolidation line, 195 shear strength of, 266 undrained shear, 270

0

Optimum moisture content, 87 Organic soil, 10 Overconsolidated clays, 193 field consolidation line for, 196 shear strength of, 272 Overconsolidation ratio, 195 Oxbow lake, 6

Ρ

Penetrometer, 259 Permeability, 39 coefficient of, 121 field test for, 127 laboratory test for, 122 empirical relationships for, 130 in stratified soils, 132 Permeameter, 122 constant-head, 123 falling-head, 124 Piles capacity, 331 construction of, 374 driven in clay, 344 driven in sand, 333 driving formulas, 350 Danish formula, 351 Engineering-News Record formula, 350 end bearing, 329 factor of safety, 338, 346, 358, 363 friction, 329 group, 360 distribution of loads in, 367 efficiency of, 360

Piles (Contiuned) hammers, 353 length of, 330 load tests, 354 negative skin friction, 360 settlement of, 370 in clay, 370 in rock, 370 in sand, 370 spacing of, 360 structural strength of, 331 types of, 329 Plastic limit, 16 Plastic state, 17 Plasticity chart, 28 Plasticity index, 16 Pneumatic rollers, 95 Poisson's ratio, 400 Porosity, 32 Primary consolidation, 178 Primary consolidation settlement of load on clay, 199 time rate of, 208

R

Rankine theory of earth pressure, 405 Reconnaissance, 47 Record of soil exploration, 80 Reinforced Earth walls, 451 Relative density, 42 Retaining structures, 435 anchored bulkheads, 457 Reinforced Earth walls, 451 retaining walls, 435 slurry trench walls, 456 Retaining walls, 435 backfill drainage for, 449 backfill soils, 435 batter, 435 cantilever, 436 contact pressure for, 441 design considerations for, 437 drainage of, 449 earth pressure charts for, 438 earth pressure computations for, 405 factor of safety of, 441 gravity, 435, 436 overturning of, 441 settlement of, 451 shape of, 437 size of, 437 sliding of, 440 stability analysis of, 437

tilting of, 451 types of, 435 Rock, 1 weathering of, 3 Rollers pneumatic, 95 sheepsfoot, 95 smooth wheel, 95 vibratory, 97

S

Sampling, 56 Sand, 9, 11 drilled shafts in, 389 piles in, 333 Saturation, degree of, 32 Secondary compression, 221 coefficient of, 222 Secondary compression settlement of load on clay, 221 Sedimentary rocks, 2 Seepage, 138 calculation of, 140 Seismic refraction method, 73 Semisolid state, 16 Sensitivity, 273 Settlement consolidation, 199 of drilled shafts, 392 of footings, 199, 221, 224 immediate, 179 of loads on clay due to primary consolidation, 199 of loads on clay due to secondary consolidation, 221 of loads on sand, 224 of piles, 370 on bedrock, 370 in clay, 370 in sand, 370 primary consolidation, 199 of retaining walls, 451 secondary compression, 221 total, 178, 323 Shallow foundations, 275 Shear strength, 41, 245 of cohesionless soil, 266 of cohesive soil, 266 normally consolidated clay, 266 consolidated undrained shear, 267 drained shear, 266 undrained shear, 270 overconsolidated clay, 271

Coulomb equation, 42, 245 methods of investigation, 246 direct shear test, 248 triaxial compression test, 252 unconfined compression test, 246 vane test, 67, 258 parameters of, 42 Sheepsfoot rollers, 95 Shelby tube, 56 Shrinkage limit, 19 Sieve analysis, 10 Silt, 10 Slope stability, Bishop's simplified method of slices, 489 of homogeneous cohesionless soils, 471 of homogeneous soils possessing cohesion, 472 Culmann method, 472 stability number method, 477 of mass resting on an inclined layer of impermeable soil, 468 method of slices, 485 Slurry trench walls, 456 Smooth wheel rollers, 95 Snow load, 278 Soil capillary rise in, 135 classification, 11, 20 classification systems, 20 coarse-grained, 9 cohesionless, 9 cohesive, 10 compaction, 85 components of, 31 compressibility of, 40 consistency, 16 consolidation of, 177 deposits, 4 exploration, 47 borings, 49 geophysical methods of, 73 record of, 80 steps of, 48 fine-grained, 9 flow of water in, 119 formation, 3 frost action in, 39 granular, 9 organic, 10 profiles, 83 shear strength, 41 stabilization, 112 preloading, 112 mechanical, 113

chemical, 113 geosynthetics, 114 geotextiles, 114 geogrids, 114 geonets, 114 geomembranes, 114 stress distribution in, 149 types, 9 unit weight test, 102 volume change, 280 water in, 119 Solid state, 16 Specific gravity of solids, 33 Speedy moisture tester, 108 Split-spoon sampler, 59 Stability analysis of retaining walls, 437 of slopes, 467 Stability number method, 477 Standard penetration test (SPT), 59 Strength envelope, 254 Stress distribution in soil, 149 Surcharge load, 418 Swell index, 202

T

Tampers, 94 Test pits, 50 Tilting of retaining walls, 451 Time factor, 210 Time rate of settlement due to primary consolidation, 208 Total settlement, 323 Total stress strength envelope, 268 Triaxial compression test, 252

U

Ultimate bearing capacity, 282 Unconfined compression test, 246 Unconfined compressive strength, 247 Unconsolidated undrained shear test, 270 Underground defects, 282 Unified Soil Classification System (USCS), 26 Uniform load on any area, 172 on a circular area, 156 on a rectangular area, 160 on a strip area, 170 Unit mass, 32 Unit weight, 32

V

Vane test, 67 Vertical pressure below a concentrated load, 149 below a loaded surface area (uniform load), 154 approximate method, 154 method based on elastic theory, 156 Vibratory rollers, 97 Void ratio, 32 Volume change in soil, 280 Volume-weight relationships, 32 Water in soil, 119 flow of, 119 Water pressure (load on foundation), 279 Water table, 57 effect on bearing capacity, 292 Weep holes, 449 Weight-volume relationships, 32 Westergaard equation, 150 Wind deposits, 7 Wind loads, 278

Ζ

Zero air voids, 88

W

Wall friction, 412 Water content, 32
