Reference: Initial Field Investigation

MUFON Case# 17015

North Port Florida Encounter

The Mutual UFO Network of Florida performed an initial assessment of suspected extraterrestrial entity activity at the Rowley residence located at 2556 Holland St, North Port, Florida. Two witnesses gave testimony and accounts, Shane Rowley and father of Shane, Michael Rowley. Suspect evidence was collected. The evidence consists of video, photographs of footprint and associated negatives and a footprint plaster cast made by the witnesses.

Based on the analysis of the witness accounts, photographs, video evidence and foot print plaster cast, it is our opinion that the events as accounted by the witnesses is unexplainable and the unusual occurrences which took places at the aforementioned address warrants further investigation.

MUFON Field Observations

Outside Observations

Upon arrival MUFON field investigator Morgan Beall member number 12273 and an independent investigator assisting Morgan Beall met with the owner of the property Mr. Michael Rowley on May 21, 2009. An examination of the property was conducted first. Traces of animal or rodent were observed surrounding the home in the form of rooting sign and burrows. Disturbed earth and mulch was observed in the front planting area left of the garage. The location of the sample footprint was observed near the lanai door. According to Michael Rowley the footprint was facing the door. A game trail or walk path was observed directly across from Shane Rowley's bedroom window. Within the forested area near the residence, signs of people in the form of trash was observed. Trash consisted of beer bottle, medicine containers, toys and other miscellanies items. Organic material was observed over top of most trash items suggesting a long period of time has passed since the trash items were placed. Also evidence of a small brush fire was evident on the sides of some palm trees via burn marks. No other usual outdoor observations were made.

Indoor Observations

Mr. Rowley and son Shane have recently moved into the home. Very little furnishings are present in the home. Most windows are covered with sheets and one front window was barricaded with a bed mattress. When Mr. Rowley was asked about the sheets and mattress he stated it was in response of the recent events. No other unusual observations were made.

Witness Accounts

The first unexplained event started wit the father Michael Rowley stepping outside to repair and inspect the water aeration tank for ground water, he experienced a large mass moving rapidly past him and into the forested area next to the house. He explained the tall unidentifiable mass made a swishing sound and did make contact with the tree leaves and brush but unlike a running animal. Shane Rowley is the primary witness. Shane Rowley on or around the 10th of April 2009 after his father first experience witnessed what he described as two "Aliens" entities outside his bedroom window. He stated the two entities were two different types based off his observations. The closest entity to the window was described as a tall (approx 9 feet) pale Gray with large eyes. He further described it as having smooth skin with very long arms of which the wrist reached well below its waist to the base of the windowsill. The other entity was described as a scaly reptile like humanoid with a rounded heart shaped head. He explained it was crouched sideways on the trunk of the palm tree in the background. He added it bobbed its head side to side. This event lasted approximately 5 minutes until the witness found himself staring at the window in the same position the next morning (missing time). Shane stated he did not remember falling asleep. Consecutive days after the initial experience Shane noted he did see the gray line entity several times in the surrounding property (please see video interviews for details). Michael Rowley attempted to tape these entities by setting up the camera at the window of Shane's bedroom. The video evidence provided did show a reflection of an eye about half way through the 3-hour tape. The video will be submitted to an expert for further analysis. In addition Michael Rowley discovered a footprint in the backyard near the lanai. He assumed he might have scared it off when he went to the back door the night before to inspected for a noise. Mr. Rowley did collect a plaster cast of the print and is in MUFON's possession. Please review witness testimony video for more details.

Evidence Collected

- Plaster cast of suspected footprint.
- Photos of the footprint and associated negatives.
- Video of suspected reflection of an eye in the forested area. 3hour Hi8 video tape.
- Witness testimony

Conclusion

Based on the assessment of the witness's testimony, initial assessment of the property and evidence collected, it is the opinion of The Mutual UFO Network, that the exact nature of

MUFON of Florida www.flmufon.com

these aforementioned events is inconclusive. Based on case studies the nature of the witness testimony and other surrounding occurrences points towards the possibility of the abduction phenomenon. More evidence is needed to determine this opinion.

Recommendation

- 1. Have witnesses participate in a lie detection test.
- 2. Have the footprint cast examined by independent experts.
- 3. Have video evidence examined by a professional.
- 4. Have Florida MUFON abduction specialist examine the case.

It is the current assigned field investigator's recommendation to conduct further investigations to determine the validity of the witnesses by the implementation of the recommendations motioned above. Currently motion activation camera systems will be deployed randomly to help assess the case further and hopeful collection of photographic evidence.

Respectfully,

Mutual UFO Network of Florida

Morgan A. Beall MUFON Field Investigator
