

May 2002

Dear Valued Customer,

Thank you for purchasing Kasenna™ MediaBase XMP for IRIX®. In combination with your high-performance SGI® server hardware, your new software enables deployments in narrowband, broadband, and broadcast networks using the following standards-based streaming formats: MPEG-1, MPEG-2, and MPEG-4.

Additional expansion licenses are cumulative and may be scaled, along with server hardware, to increase the capabilities of your media server. The following Kasenna MediaBase XMP license options are available:

- SR4-MXFORM1-0205 [Additional MediaBase XMP MPEG-1 format]
- SR4-MXFORM2-0205 [Additional MediaBase XMP MPEG-2 format]
- SR4-MXFORM4-0205 [Additional MediaBase XMP MPEG-4 format]
- SR4-MXSTR-0205-10 [MediaBase XMP 10 additional streams]
- SR4-MXSTR-0205-100 [MediaBase XMP 100 additional streams]
- SR4-MXMCPO-0205 [MediaBase XMP Multicast Playout option]
- SR4-MXVCD-0205 [MediaBase XMP VCD [transmit/receive pair] option]
- SR4-MXVCDE-0205 [MediaBase XMP VCD Receiver [for an edge server]]
- SR4-MXEN10-0205 [MediaBase XMP additional encoding streams]

It is very important that you record the software serial number before discarding the MediaBase packaging. This serial number will be required during the installation and licensing process and for product support inquiries.

To complete your MediaBase installation, you need to obtain a license using the software serial number attached to the Kasenna packaging or to the Kasenna MediaBase XMP CD-ROM. Locate your SGI hardware serial number and Kasenna software serial number, and then contact SGI licensing at the following URL:

<http://www.sgi.com/support/licensing/>

You will receive a permanent FLEXIm® license to enable this product version.
