<b>PART 1: INTRODUCTION</b>	<b>1</b>
Chapter 1: Introduction to Data Communications	3
<b>PART 2: FUNDAMENTAL CONCEPTS</b>	<b>39</b>
Chapter 2: Application Layer	41
Chapter 3: Physical Layer	76
Chapter 4: Data Link Layer	117
Chapter 5: Network and Transport Layers	148
<b>PART 3: NETWORK TECHNOLOGIES</b>	<b>195</b>
Chapter 6: Local Area Networks	197
Chapter 7: Wireless Local Area Networks	232
Chapter 8: Backbone Networks	263
Chapter 9: Metropolitan and Wide Area Networks	302
Chapter 10: The Internet	339
<b>PART 4: NETWORK MANAGEMENT</b>	<b>369</b>
Chapter 11: Network Security	371
Chapter 12: Network Design	434
Chapter 13: Network Management	469
<b>PART 5: APPENDICES</b>	<b>503</b>
Appendix A: Connector Cables	505
Appendix B: Spanning Tree Protocol	516
Appendix C: IP Telephony	519
Appendix D: Cellular Technologies	522
Appendix E: TCP/IP Game	524
Appendix F: Windows Server	535
Glossary	547
Index	571

# CONTENTS

## PART 1

### INTRODUCTION

#### CHAPTER 1 INTRODUCTION TO DATA COMMUNICATIONS

Introduction	5
A Brief History of Communications in North America	6
A Brief History of Information Systems	9
A Brief History of the Internet	10
Data Communications Networks	12
Components of a Network	12
Types of Networks	14
Network Models	17
Open Systems Interconnection Reference Model	17
Internet Model	19
Message Transmission Using Layers	21
Network Standards	23
The Importance of Standards	23
The Standards-Making Process	24
Common Standards	26
Future Trends	27
Pervasive Networking	28
The Integration of Voice, Video, and Data	29
New Information Services	30
Implications for Management	32
Summary	32

## PART 2

### FUNDAMENTAL CONCEPTS

#### CHAPTER 2 APPLICATION LAYER

Introduction	43
Application Architectures	43
Host-Based Architectures	45
Client-Based Architectures	45
Client-Server Architectures	46
Choosing Architectures	50
World Wide Web	52
How the Web Works	52

Inside an HTTP Request	53
Inside an HTTP Response	54
Electronic Mail	56
How E-Mail Works	57
Inside an SMTP Packet	60
Listserv Discussion Groups	61
Attachments in Multipurpose Internet Mail Extension	62
Other Applications	63
File Transfer Protocol	63
Telnet	63
Instant Messaging	65
Videoconferencing	65
Implications for Management	68
Summary	69

#### CHAPTER 3 PHYSICAL LAYER

Introduction	78
Circuits	79
Circuit Configuration	79
Data Flow	81
Multiplexing	82
How DSL Transmits Data	88
Communication Media	88
Guided Media	89
Wireless Media	90
Media Selection	95
Digital Transmission of Digital Data	96
Coding	97
Transmission Modes	98
Digital Transmission	99
How Ethernet Transmits Data	100
Analog Transmission of Digital Data	101
Modulation	102
Capacity of a Circuit	105
How Modems Transmit Data	105
Digital Transmission of Analog Data	106
Translating from Analog to Digital	106
How Telephones Transmit Voice Data	107
How Instant Messenger Transmits Voice Data	109
Implications for Management	110
Summary	110

**X CONTENTS****CHAPTER 4 DATA LINK LAYER**

Introduction	119
Media Access Control	119
Controlled Access	120
Contention	120
Relative Performance	121
Error Control	121
Sources of Errors	122
Error Prevention	124
Error Detection	125
Error Correction via Retransmission	127
Forward Error Correction	128
Error Control in Practice	129
Data Link Protocols	130
Asynchronous Transmission	132
Asynchronous File Transfer Protocols	132
Synchronous Transmission	133
Transmission Efficiency	13
Implications for Management	139
Summary	141

**CHAPTER 5 NETWORK AND TRANSPORT LAYERS**

Introduction	150
Transport and Network Layer Protocols	151
Transmission Control Protocol/Internet Protocol	152
Internetwork Packet Exchange/Sequenced Packet Exchange	154
X.25	154
Transport Layer Functions	155
Linking to the Application Layer	155
Packetizing	157
Addressing	159
Assigning Addresses	160
Address Resolution	164
Routing	166
Types of Routing	168
Routing Protocols	171
Multicasting	174
TCP/IP Example	175
Known Addresses, Same Subnet	176
Known Addresses, Different Subnet	179
Unknown Addresses	180
TCP Connections	181
TCP/IP and Network Layers	181
Implications for Management	184
Summary	184

**PART 3****NETWORK TECHNOLOGIES****CHAPTER 6 LOCAL AREA NETWORKS**

Introduction	199
Why Use a LAN?	199
Dedicated-Server versus Peer-to-Peer LANs	200
LAN Components	202
Network Interface Cards	202
Network Cables	202
Network Hubs	203
Network Operating Systems	206
Traditional Ethernet (IEEE 802.3)	209
Topology	209
Media Access Control	210
Types of Ethernet	211
Switched Ethernet	213
Topology	214
Media Access Control	215
Performance Benefits	216
The Best Practice LAN Design	216
Effective Data Rates	217
Costs	219
Recommendations	219
Improving LAN Performance	221
Improving Server Performance	222
Improving Circuit Capacity	224
Reducing Network Demand	225
Implications for Management	225
Summary	226

**CHAPTER 7 WIRELESS LOCAL AREA NETWORKS**

Introduction	234
WLAN Components	235
Network Interface Cards	235
Access Points	236
Radio Frequencies	237
Wi-Fi	239
Topology	241
Media Access Control	241
Types of Wi-Fi	242
Wi-Fi as Public Internet Access	244
WiMAX	244
Topology	245
Media Access Control	245
Types of WiMAX	245

Bluetooth	246
Topology	246
Media Access Control	246
The Best Practice WLAN Design	247
Effective Data Rates	247
Costs	248
Recommendations	249
Physical WLAN Design	249
WLAN Security	251
Improving WLAN Performance	252
Improving Device Performance	253
Improving Circuit Capacity	253
Reducing Network Demand	254
Implications for Management	255
Summary	256

## CHAPTER 8 BACKBONE NETWORKS

---

Introduction	265
Backbone Network Components	265
Switches	265
Routers	266
Gateways	267
A Caution	269
Backbone Network Architectures	270
Backbone Architecture Layers	270
Routed Backbone	271
Collapsed Backbone	274
Virtual LAN	280
Backbone Technologies	284
Asynchronous Transfer Mode	285
The Best Practice Backbone Design	289
Architectures	290
Effective Data Rates	290
Conversion between Protocols	291
Recommendations	291
Improving Backbone Performance	293
Improving Computer and Device Performance	293
Improving Circuit Capacity	294
Reducing Network Demand	294
Implications for Management	294
Summary	295

## CHAPTER 9 METROPOLITAN AND WIDE AREA NETWORKS

---

Introduction	304
Circuit-Switched Networks	305
Basic Architecture	305

Plain Old Telephone Service	306
ISDN	307
Dedicated Circuit Networks	308
Basic Architecture	308
T Carrier Services	313
Synchronous Optical Network	314
Packet-Switched Networks	314
Basic Architecture	315
X.25	318
Asynchronous Transfer Mode	318
Frame Relay	319
Switched Multimegabit Data Service	320
Ethernet Services	321
Virtual Private Networks	322
Basic Architecture	322
VPN Types	324
The Best Practice MAN/WAN Design	325
Improving MAN/WAN Performance	329
Improving Device Performance	329
Improving Circuit Capacity	329
Reducing Network Demand	330
Implications for Management	331
Summary	332

## CHAPTER 10 THE INTERNET

---

Introduction	341
How the Internet Works	341
Basic Architecture	341
Connecting to an ISP	343
The Internet Today	345
Internet Access Technologies	346
DSL	347
Cable Modems	350
Fixed Wireless	352
Mobile Wireless	353
Future Technologies	354
Internet Governance	355
Internet 2	357
Implications for Management	359
Summary	359

## PART 4 NETWORK MANAGEMENT

---

### CHAPTER 11 NETWORK SECURITY

---

Introduction	373
--------------	-----

**xii** CONTENTS

Why Networks Need Security	375
Types of Security Threats	375
Network Controls	377
Risk Assessment	378
Develop a Control Spreadsheet	378
Identify and Document the Controls	383
Evaluate the Network's Security	383
Business Continuity Planning	384
Preventing Disruption, Destruction, and Disaster	385
Detecting Disruption, Destruction, and Disaster	390
Correcting Disruption, Destruction, and Disaster	391
Intrusion Prevention	394
Preventing Intrusion	395
Detecting Intrusion	418
Correcting Intrusion	422
Best Practice Recommendations	422
Implications for Management	424
Summary	425

**CHAPTER 12 NETWORK DESIGN**

Introduction	436
The Traditional Network Design Process	436
The Building-Block Network Design Process	438
Needs Analysis	440
Geographic Scope	440
Application Systems	441
Network Users	443
Categorizing Network Needs	443
Deliverables	444
Technology Design	445
Designing Clients and Servers	445
Designing Circuits and Devices	445
Network Design Tools	446
Deliverables	447
Cost Assessment	448
Request for Proposal	448
Selling the Proposal to Management	449
Deliverables	450
Designing for Network Performance	450
Managed Networks	450
Network Circuits	455
Network Devices	456
Minimizing Network Traffic	459
Implications for Management	463
Summary	464

**CHAPTER 13 NETWORK MANAGEMENT**

Introduction	471
Organizing the Network Management Function	471
The Shift to LANs and the Internet	472
Integrating LANs, WANs, and the Internet	473
Integrating Voice and Data Communications	473
Configuration Management	475
Configuring the Network and Client Computers	475
Documenting the Configuration	476
Performance and Fault Management	477
Network Monitoring	478
Failure Control Function	480
Performance and Failure Statistics	483
Improving Performance	485
End User Support	487
Resolving Problems	487
Providing End User Training	488
Cost Management	488
Sources of Costs	489
Reducing Costs	492
Implications for Management	494
Summary	494

**PART 5****APPENDICES**

<b>APPENDIX A CONNECTOR CABLES</b>	<b>505</b>
<b>APPENDIX B SPANNING TREE PROTOCOL</b>	<b>516</b>
<b>APPENDIX C IP TELEPHONY</b>	<b>519</b>
<b>APPENDIX D CELLULAR TECHNOLOGIES</b>	<b>522</b>
<b>APPENDIX E TCP/IP GAME</b>	<b>524</b>
<b>APPENDIX F WINDOWS SERVER</b>	<b>535</b>
<b>GLOSSARY</b>	<b>547</b>
<b>INDEX</b>	<b>571</b>
