

INDEX

Note: Pages in **bold** locate figures; pages in *italic* locate tables.

A

aberrations, lens, 1256
absolute conservation laws, 1525
absolute pressure, 460–61
absolute temperature scale
 Kelvin scale and, 575–76
 molecular kinetic energy and, 621
 Rankine scale, 601
 speed of sound in gases, 536
absolute zero, 576, 690, 1446–47
absorbed dose of radiation, 1489
absorption edges, 1426
absorption lines, 1248–49
absorption of light, 1307–9
absorption, radiation and, 597
absorption spectrum, 1318–19, 1426
ac adapter, 1081–82
accelerating ring, 1516
accelerating universe, 1537–38
acceleration
 angular. *See* angular acceleration
 angular velocity and, 285–90
 apparent weight in elevators, 145
 average. *See* average acceleration
 centripetal. *See* centripetal acceleration
 changing, 58–59
 circular motion and, 87–88
 components of, 293–94
 constant, 47–53, 59
 defined, 43
 down a hill, 145–47
 force and, 118–20
 free-fall motion and, 54, 56
 instantaneous. *See* instantaneous acceleration
 lateral, 161
 linear, 293–96
 Newton's first law of motion and, 111
 Newton's second law of motion and, 115–23
 parallel components of, 77–78
 perpendicular components of, 77–78
 projectile motion and, 80
 radial, 90, 158–59
 riding in vehicle, **114**
 of a rocket, 272
 of rolling sphere, 327–28
 in simple harmonic motion, 425–28,
 430–31
 in sinusoidal waves, 496–97
 of skier, 79, **82**
 tangential components of, 293–94
 transverse, 497, 510–11
 two bodies with same, 147–48
 two bodies with same magnitude of, 148–49
 velocity and, 43
 on v_x - t graph, 45–47
 on x - t graph, 45–47
 of yo-yo, **327**
acceleration due to gravity
 on carnival ride, 90
 center of gravity and, 355–57
 falling monkey, **87**
 freely falling bodies, 54
 gravitation and, 384, 388
 mass and weight, 121–22, 138
 pressure in a fluid, 459
 throwing a discus, 295
 trajectory of projectiles, 79
acceleration, linear, 1515
acceleration-time (a-t) graphs, 47–48
acceleration vectors, 43, 74–79
accommodation process, 1186

accretion disks, 408
accuracy, 8, 10–11
Achilles tendon, **222**
acrobat, 334
ac source, 1062
actinide series, 1421
action-at-a-distance force, 721
action-reaction pairs, 123
activation energy, 631
activity, half-life and, 1485–89
adapter, ac, 1081–82
addition
 significant figures in, 9
 vector, 13–15
additive property
 of mass, 117
 of wave function, 506
adiabat, 658
adiabatic process
 Carnot cycle and, **685**
 defined, 656–57
 diesel engine and, **664**
 for ideal gas, 662–64
 ratio of heat capacities, 661
 reversible, 693
 work done in, 664
aerodynamic forces, 376, 444
air
 amplitude of sound wave in, 530
 density of, 457–58
 dielectric strength of, 795, 833
 Doppler effect and, 556
 force of, 459
 index of refraction of, **1126**
 intensity of sound wave in, 538
 in scuba tanks, 614
 speed of sound in, 536
 thermal conductivity of, 592–93
air conditioners, 588, 646–47, 681, **682**
air drag (air resistance)
 backward force and, 113
 baseball in flight and, **3**
 defined, 149
 frictional forces and, 157, 225
 overview, 155–56
 projectile motion and, 79–82
air friction, **577**
airplanes
 banked curves and, **162**
 flying in crosswind, **94–95**
 heat engines in, 675
 lift on wings, **472**
 propellers and, **295, 552**
 relative velocity and, **91**
 sonic booms and, 558–59, **560**
 thrust of, **200**
 weight and, **388**
Airy disk, 1253
Airy, George, 1253
alkali halides, 1443
alkali metals, 1326, 1419–20
allowed transitions, 1412
alpha decay, 1480–81
alpha particles
 defined, 1480
 diffraction of, 1354
 potential barriers and, 1387
 scattering of, **1320, 1321**
alternating-current (ac) circuits
 capacitors in, 1067–69
 comparing elements, 1069–70
 defined, 850, 881, 1061
 inductors in, 1065–67
 L-R-C series and, 1051, 1070–74

phasors and, 1061–64
power in, 1074–77
resistance and reactance, 1064–70
resistors in, 1065, 1069
resonance in, 1077–80
tailoring, 1078–79
transformers and, 1080–83
alternating-current (ac) generator, 1001
alternators, 1000–1001, 1061
Amalthea (moon), **385**
ammeters
 defined, 860
 example, 861
 overview, 892–93
 rectifying, 1064
 voltmeters and, 893–94
ammonia molecules, 745
amorphous solids, 1441
ampere, 966–67
Ampère, André Marie, 848, 918
Ampere's law
 applications of, 973–76
 for conductors, 970–71, 973–74
 defined, 972
 generalizing, 1013–14
 general statement, 971–72
 Maxwell's equations and, 1093, 1098
 overview, 969–70
 for solenoids, 974–76
 wave equation and, **1100**
amplitude
 beats and, 551
 current, 1062
 of damped oscillations, 440
 defined, 420–21
 displacement, 528, 537–39
 of forced oscillations, 442
 magnetic fields and, 933
 of pendulums, 437
 pressure, 529–31, 537–39
 in simple harmonic motion, 424
 of sinusoidal waves, 1102
 in two-source interference, 1214–15
 vibrations of molecules and, 435
 voltage, 1062, 1065
 wavelength and, 490
AM radio, 1096
analyzer, 1137–38, 1142
Anderson, Carl D., 1510–11, 1514
angles
 critical, 1130
 Greek letters for, 73
 phase, 426, 1066, 1071–73
 polarizing, 1139
 scalar product and, 23–24
 of vectors, 16
angular acceleration
 average, 289
 calculating, 289–90
 constant, 290–92
 defined, 289, 316
 instantaneous, 289
 for rigid bodies, 319–22
 rotation with, 290–92
angular collision, 336
angular displacement, 286, 329
angular frequency
 defined, 420–21
 natural, 443
 resonance, 1078
 simple harmonic motion and, 423–25
 of sinusoidal waves, 1102
angular kinematics, 293–96
angular magnification, 1190

angular momentum, 977–78
 Bohr magneton, 977–78
 conservation of, 333–37
 in crime bust, 336–37
 de Broglie waves and, 1351
 defined, 331
 electron spin and, 1414
 equilibrium and, 355
 in excited levels of hydrogen, 1406
 Kepler’s second law and, 398
 orbital, 1403–4, 1417
 overview, 331–33
 quantization of, 1323
 of rigid body, 332–33
 selection rules, 1439
 spin, 1414–15, 1417, 1471, 1521
 torque and, 331, 333
 angular simple harmonic motion, 433–34
 angular size, 1189
 angular speed, 293, 339
 angular velocity
 acceleration and, 285–90
 average, 286
 calculating, 287–88
 instantaneous, 286–87
 as vector, 288–89
 annulus, 748
 anode, 808, 855, 1310
 anomalous Zeeman effect, 1413
 antennas, 1217–18
 anti-damping force, 444
 antimatter, 1546
 antineutrinos, 281, 1481–82
 antineutrons, 1521
 antinodal curves, 1210
 antinodal planes, 1112
 antinodes, 508, 541–42, 544
 antinucleons, 1542
 antiparallel vectors, 12
 antiparticles, 1482, 1512
 antiprotons, 1302, 1521, 1524
 antiquarks, 1400, 1526
 ants, 522
 aphelion, 397
 apparent weight
 in accelerating elevator, 145
 defined, 145, 403
 on earth, 388
 Earth’s rotation and, 403–5
 overview, 145–49
 apparent weightlessness, 145–49, **394**, 405
 aqueducts, **354**
 aqueous humor, 1186
 Archimedes’ principle, **463**
 arctan notation, 17
 argon, 436, 564, 592
 argon laser, 1122
 Aristotle, 53
 arrows
 shooting, **76**
 vector, **109**
 arsenic, 1453–54
 asteroid belt, 416
 astigmatism, 1187–88
 Aston, Francis, 930
 astronomical telescope, 1192
 astronomy, 557
 asymptote, 898
 a-t (acceleration-time) graphs, 47–48
 atmospheric pressure, 458–60, 587, 615, **632**
 atm (atmosphere) unit, 336, 366, 575, 612
 atomic clock, 5
 atomic line spectra, 1314–19
 atomic mass, 619, *1471*
 atomic number
 defined, 712, 1409, 1417, 1470
 hydrogenlike atoms, 1326
 atomic structure
 electron spin, 1413–17

 exclusion principle, 1417–23
 hydrogen atom, 1401–9
 many-electron atoms, 1417–23
 x-ray spectra, 1423–26
 Zeeman effect, 1409–13
 atoms
 age of, 1543
 discovery of, 1509
 emitting photons, **1314**
 energy levels of, 1314–19, 1424–26
 Franck-Hertz experiment, 1317
 hydrogenlike, 1326–27, 1408–9
 interstitial, 1445
 in magnetic fields, 1411–12
 many-electron, 1417–23
 neutral, 1470, *1471*
 nuclear, 1319–22
 photon absorption, 1318
 population inversion of, 1328–30
 reduced mass of, 1325–26
 Rydberg, 1431
 structure of, **711–12**
 atoms, structure of, **711–12**
 attack of tone, 532
 attenuator chain, 915
At the Earth’s Core (Burroughs), 403
 Atwood’s machine, 169, 180
 audible range, 527
 aurora australis (Southern Lights), **927**
 aurora borealis (Northern Lights), **927**
 automobiles. *See also* internal-combustion engines
 adiabatic compression in, **664**
 along circular paths, **88**
 center of gravity and, **357**
 collisions and, **248**, **259**, 260, **261**
 compressing gas in engines, **614**
 displacement and, **182**
 gasoline burning in, **231**
 hydrogen as fuel for, **622**
 inductance and, 1037
 intercoolers, 672
 magnetic-field energy, **1040**
 shock absorbers, **441**
 turbochargers, 672
 vertical simple harmonic motion in,
 433
 weight distribution for, 359–60
 wiring for, 902–3
 autoradiography, 1491
 available energy, 1517–18
 avalanche breakdown, 1458
 average acceleration
 angular, 289
 calculating, 76–77
 defined, 75
 overview, 43–44
 x-acceleration, 43
 average angular acceleration, 289
 average angular velocity, 286
 average density, 457, 464
 average power, 199, 903, 1138
 average speed, 40, 624
 average velocity
 average speed and, 40
 calculating, 73–74
 defined, 37, 72
 instantaneous velocity and, 40–41
 straight-line motion and, 37–39
 average x-acceleration, 43
 average x-velocity, 37–38
 Avogadro’s number, 618–21, 1445
 axis
 of coils, magnetic fields on,
 968–69
 major, 397
 moving, 323–29
 optic, 1161
 polarizing, 1136
 precession and, 337

 semi-major, 397
 of symmetry, 332–33, 357
 axons, 856, 915

B

back emf, 1001–2
 background radiation, 1545–46
 “back-of-the-envelope calculations,” 11
 back spin, in golf, 474, **475**

 bicycles
 angular acceleration, 289
 center of mass, **326**
 gears, angular speed of, **296**
 relative velocity, 91
 rotational motion, 329
 Big Bang theory, 415, 557, 1534, 1542
 Big Crunch, 1536
 Big Dipper, 35
 billiard balls, **191**, **262**
 bimetallic strip thermometer, **573**
 binary stars
 black holes and, **408**
 determining masses, 1305
 different masses, 417
 Doppler effect, 557
 equal masses, 417
 gravitational interactions and, 1532
 spectroscopic, 1305
 binding energy, 283, 1434, 1473–85, 1495
 binoculars, **1131**
 binomial theorem, 435
 biological effects of radiation, 1489–92
 biologically equivalent dose, 1489
 Biot and Savart, law of, 961–62, 967
 bipolar junction transistor, 1459

birds
 center of gravity and, 358
 defensive actions of, 277
 in flight, 210
 singing in meadow, **540**, 541
 birefringence, 1141
 blackbody, 597, 1335, 1337, 1440
 blackbody radiation, 1335
 black holes, 405–9, 1289
 black smokers, 479
 Bloch, Felix, **1445**
 blood flow, 473–74
 blue supergiant star, 1345
 BMR (basal metabolic rate), 603, 608
 body. *See* human body
 body-centered cubic lattice, 1441, **1442**
 Bohr magneton, 976–78, 1410
 Bohr model
 de Broglie waves and, 1351
 defined, 1322
 electron spin and, 1414–15
 on energy levels, 1318, 1328
 Heisenberg uncertainty principle and, 1357
 of hydrogen atom, 809, 951, 985, 1326–27, 1401
 hydrogen energy levels, 1324–25
 hydrogenlike atoms, 1326–27
 magnetic interactions and, 1409
 Moseley’s law and, 1424
 nuclear motion and, 1325–26
 stable electron orbits, 1322–24
 Zeeman effect and, 1410

 mixing ink and, **696**
 phase changes, **586**
 specific heat of, 583, 585
 supercooled, 588
 thermal expansion of, 580
 water molecules, 266–67, 735, 938
 water pressure in homes, **470**
 water strider, **465**, 675
 watt, 199, 717
 Watt, James, **199**
 wave crests, 1123, 1208, **1286**
 wave equation
 defined, 497, 1100
 derivation of, 1099–1101
 for free particles, 1364–65
 Maxwell’s equations and, 1096
 wave interference and, 505–7
 wave motion and, 500
 wave fronts, 1096, 1122–23
 wave functions
 additive property of, 506
 defined, 491, 1350
 graphing, 493–94
 harmonic oscillators, 1388–89, **1390**
 hybrid, 1435
 hydrogen, 1408
 interpretation of, 1362
 for longitudinal waves, 497
 for particle in a box, 1376–77
 for potential wells, **1383**
 Schrödinger equation and, 1361–67
 for sinusoidal waves, 491–96
 wave intensity, 504–5, 537
 wavelength
 continuous spectra, 1334–38
 de Broglie, 1350–52
 defined, 490
 Doppler effect and, 555
 electron microscope, 1360
 of hydrogen spectrum, 1315
 interference and, 1208
 of light, **1242**
 line spectrum and, 1308
 of sonar waves, 534–35
 of sound waves, **1242**
 x-ray spectra and, 1423
 wave motion, 488–92, 500–502, 533

wave number, 493, 1364
 wave packets, 1366–67
 wave-particle duality of light, 1338–39
 wave propagation, 491–92, 496, 503
 wave pulse, 489–90, **505–7**
 waves
 on clothesline, 495–96
 coherent, 1208–11
 “doing the wave,” **489**
 electromagnetic. *See* electromagnetic waves
 energy in motion of, 502–5
 graphing, 493–94, **529**
 infrasonic, 528
 interference of, 505–7, 548–50
 light as, 1122, 1127
 longitudinal. *See* longitudinal waves
 mathematical description of, **492**, 493–97
 mechanical. *See* mechanical waves
 normal modes of a string, 511–15
 particles as, 1349–74
 periodic, 489–91
 plane. *See* plane waves
 power in, 503–4
 propagation of, 1122–23
 P-waves, 62
 radio, 487, 556–57, 1213–14
 reflected, 505
 scattering of, **1251**
 seismic, 487
 shock, 558–60
 sinusoidal. *See* sinusoidal waves
 sonar, 534–35
 sound. *See* sound waves
 standing, on a string, 487, 507–11
 superposition principle and, 1208
 S-waves, 62
 transverse, 488–90, 498–502, 1097, 1133
 traveling, 508, 548–49, 1106
 two-dimensional, 523
 ultrasonic, 528
 wave speed
 calculating, 501–2
 defined, 489
 index of refraction and, 1125
 on a string, 498–502
 WCCO radio station, 1117
 weak interaction, 164, 1520
 weakly interacting massive particles (WIMPs), 1537
 weber, 924
 Weber, William, 924
 weight
 apparent. *See* apparent weight
 defined, **108**
 gravitation and, 163, 388–90, 403–5
 measuring, 122–23
 molecular, 584
 Newton’s laws of motion, 120–23
 of roomful of air, 457–58
 true, 403, **404**
 weightlessness
 apparent, 145–49, **394**, 405
 true, 394
 weightlifter, **184–85**
 Weinberg, Steven, 1530
 Wentzel, Gregor, 1399
 Westinghouse, George, 1061
 Wheatstone bridge, 913
 whips, cracking, 559
 white dwarf stars, 1467
 white noise, 532
 wide-angle lens, 1183
 Wien displacement law, 1335–36
 Wilson, Robert, 1545
 WIMPs (weakly interacting massive particles), 1537
 wind-chill factor, 596
 wind instruments, 487, 514, 543–46
 wind turbines, **330**
 wire chambers, 1519
 WKB approximation, 1399

“wobble” of stars, 400
 woofer, 1069, 1261

work

in adiabatic process, 664
 in composite systems, 191–92
 constant force and, 183
 conversion to heat, 683
 defined, 182
 done during volume changes, 647–49
 force and, 185–86, 192–98
 friction and, 229–32
 kinetic energy and, 182–89
 negative, 183–85
 overview, 182–86
 positive, 183–85
 power and, 199–201
 relativistic, 1292–95
 in rotational motion, 329–31
 thermodynamics and, 647, 650
 work-energy theorem, 186–92
 zero, 183–85
 work-energy theorem
 defined, 187–88, 781
 motion along a curve, 196–98
 overview, 186–92
 relativistic kinetic energy, 1292
 straight-line motion, 195–96
 work function, 1310
 working substance
 Carnot cycle and, 689
 defined, 675
 in refrigerators, 681
 workless refrigerators, 682

X

x-rays
 applications of, 1334
 Compton scattering, 1332–34
 diffraction of, 1250–52, **1354**
 as electromagnetic waves, 487
 hazards of, 1490
 photons, 1330–31
 production of, 1330–34
 scattering of, 1309, 1330–34
 of soft tissue, **916**
 spectra, 1423–26
 wavelengths for, 1096
 x - t graph
 acceleration on, 45–47, 49
 defined, 38–39
 velocity on, 42–43

Y

Yang, C. N., 1525
 Yeager, Chuck, 559
 Yerkes refracting telescope, 1201
 yield point, 364
 Y networks, 844
 Young’s modulus, 364, 365
 Young, Thomas, 1211–12
 yo-yo, **325**, **327**, 350
 Yukawa, Hideki, 1514

Z

Zeeman effect, 1409–14
 Zeeman, Pieter, 1409
 zero energy, 1378
 zero-gravity, **253**
 zero heat transfer, 662
 zero mass, 1530–31
 zero net force, 111–15
 zeroth law of thermodynamics, 571–72
 zero vector, 25
 zero work, 183–85
 zinc, **1413**
 zinc sulfide, 1443
 Z machine, 825
 zoom lenses, 1184–85
