

## Radiant Energy:

### Unraveling Tesla's Greatest Secret

By Ken Adachi

June 1, 2001

*[The story you are about to read is derived from a carefully researched paper presented by Dr. Peter Lindemann before a private audience in Irvine, California on September 12, 2000. The lecture was titled "The Free Energy Secrets of Cold Electricity". It detailed the story of Radiant Energy and its successful application by Edwin Gray in an over unity motor design which Gray debuted in 1973. The real detective work (& credit) in uncovering Tesla's discovery of Radiant energy came from author Gerry Vassilatos in his recent book, "Secrets of Cold War Technology" without which Lindemann could not have solved the enigma of Gray's Radiant circuit design. This lecture delivered the goods. The secret of Tesla's Radiant Energy has finally been revealed in manifold detail and only awaits the industry of those who care to study and understand it. Part 1 presents a general overview of Tesla's discovery and the political, intrigues that led to its subsequent suppression. Part 2 will detail the nuts and bolts of how Tesla produced Radiant Energy with block diagrams, schematics, and drawings from Tesla's original patents to illustrate all of the necessary elements and parameters required. Additional details on Gray's modern adaptation of Tesla's Radiant circuitry and a brief look at Eric Dollard, the only man to successfully recreate Tesla's Colorado Springs Magnifying transmitter and reproduce the pure steaming white rays of Radiant energy in 1986 exactly as described by Tesla in his Colorado journals. Ken Adachi]*

Of all the great inventions and discoveries of Nikola Tesla, nothing stood out with greater potential benefit to the whole of humanity than his discovery of Radiant Energy in 1889. The series of observations that led to the discovery of Radiant energy initially grew out of experiments that Tesla had conducted in an attempt to duplicate the results that Heinrich Hertz had claimed to achieve in affirming the existence of electromagnetic waves, the discovery of which Hertz announced in 1887. While replicating Hertz's experiments, Tesla experimented with violently abrupt DC electrical discharges and discovered a new force in the process. Only after conducting exhaustive experimental trials for the next three years, did Tesla announce this stupendous discovery in a paper published in December, 1892, entitled "The Dissipation of Electricity". Incredibly, most academicians of the day completely missed the mark in understanding the true significance of his paper. Noted scientists such as Sir Oliver Lodge, mistakenly thought that Tesla was referring to high frequency AC electricity in the operation of the Tesla Transformer, a huge blunder that remains to this day in the misnaming and misinterpretation of the Tesla Coil. The transformer that Tesla referred to in the 1892 paper did not operate on magnetic/electric field induction created by alternating currents. It operated in an entirely new domain of physics based on abrupt discharges of electrostatic potentials and the subsequent release of kinetic Radiant Energy from the omnipresent ether. Tesla was now operating under entirely new rules which he referred to as "dynamic" electro-static forces and had, by now, completely abandoned any further interest in the AC waveform. The genesis of the Lodge misunderstanding, however, began a few years earlier with the publication of certain mathematical formulas by a brilliant Scotsman named James Clerk Maxwell.

#### Maxwell's Equations

Using mathematical models, James Clerk Maxwell had earlier suggested that two different types of electrical disturbances could possibly exist in Nature. One type was a longitudinal electric wave which required alternating concentrations of densified and rarefied pulsations of electrostatic fields that moved along a single vector (today, we refer to these as standing waves or scalar waves). Maxwell ultimately rejected this idea because he was convinced that this type of wave propagation was impossible to achieve, but his assumption was erroneous and would later portend formidable consequences for Tesla and the world at large.

Maxwell's second wave postulation was that of a transverse electromagnetic wave that exhibited a rapid alternation of electric fields along a fixed axis that radiated away from its point of origin at the speed of light and was detectable at great distances. Maxwell had more faith in the existence of this type of wave and encouraged experimenters to look in this direction. It was the discovery of this type of wave that Hertz had laid claim to, but Tesla was meticulous and fastidious in replicating Hertz's experimental parameters and he could not obtain the results claimed by Hertz.

Tesla discovered a fundamental flaw in Hertz's experiment: Hertz had failed to take into account the presence of air in his experiments. Hertz had mistakenly identified electrostatic inductions or electrified shockwaves as true electromagnetic waves. Tesla was saddened to bring this news to the distinguished academician, but felt scientific honesty was paramount if progress was to be achieved. Tesla visited Hertz in Germany and personally demonstrated the experimental error to him. Hertz agreed with Tesla and had planned to withdraw his claim, but reputations, political agendas, national pride, and above all, powerful financial interests, intervened in that decision and set the stage for a major rift in the 'accepted' theories that soon became transformed into the fundamental "laws" of the electric sciences that have held sway in industry and the halls of academia to the present day.

Tesla's introduction to the phenomena of Radiant Energy began with early observations by linesmen working for Thomas Edison, Tesla's former employer

#### DC Anomalies

Before Tesla's invention of the Polyphase AC generator became the industry standard and overtook Thomas Edison's use of DC generators, the DC electrical system was the only system available to deliver electricity to America's homes and factories. Due to the resistance offered by long transmission lines, Edison had to produce very high DC voltages from his generators in order to deliver enough voltage and current to its final destination. He also had to provide additional 'pumping' stations along the way to boost the sagging voltage which dwindled from line losses. A curious anomaly occurred in the very first instant of throwing the power switch at the generating station: Purple/blue colored spikes radiated in all directions along the axis of the power lines for just a moment. In addition, a stinging, ray-like shocking sensation was felt by those who stood near the transmission lines. In some cases, when very large DC voltages surged from the generators, the "stinging" sensation was so great that occasionally a blue spike jumped from the line and grounded itself through a workman, killing him in the process.

Tesla realized almost immediately that electrons were not responsible for such a phenomena because The blue spike phenomena ceased as soon as the current started flowing in the lines. Something else was happening just before the electrons had a chance to move along the wire. At the time, no one seemed to be very interested in discovering why these dramatic elevations in static electrical potential were taking place, but rather, engineering design efforts were focused on eliminating and quenching this strange anomaly which was considered by everyone to be a nuisance-except Tesla. Tesla viewed it as a powerful, yet unknown form of energy which needed to be understood and harnessed if possible. The phenomena only exhibited itself in the first moment of switch closure, before the electrons could begin moving. There seemed to be a "bunching" or "choking" effect at play, but only briefly. Once the electrons began their movement within the wire, all would return to normal. What was this strange energy that was trying to liberate itself so forcefully at the moment of switch closure? .

#### Tesla, Genius Out of Time

In the later quarter of the 19th century, Tesla was alone in his opposition to the fundamental views of the nature of electrical forces as described by three of the biggest names in electric science: James Clerk Maxwell, Herman Von Helmholtz, and Heinrich Hertz. Tesla possessed a broader vision of the cosmos because his keen sense of awareness and especially his natural intuitive insights gave him a deeper understanding of the role that the ether (or aether) played in the manifestations of all electrical phenomena while his contemporaries focused their attention exclusively on the electromagnetic component (assuming that no other component could be involved). This lack of etheric insight by his contemporaries (with the exception of Sir William Crookes) and the heated controversy that the mere mention of the ether had engendered was to cause Tesla ridicule and sarcasm from men of inferior intellect for decades. The ether controversy largely dissipated in the academic arena after the publication of Einstein's Theory of Relativity (1905) and the Michaelson-Morley Experiment which essentially declared that the ether 'theory' was dead, but Tesla's insights and deductions concerning the role of the ether were correct all along.

The ether existed then and it exists now, despite the lock step denials by mainstream science, past or present. Rudolf Steiner, another man of genius, affirmed that the ether was composed of four fractions which he described as 1) the Light Ether, 2) the Warmth Ether, 3) the Chemical Ether, and 4) the Life Ether, a combination of the first three. Tesla's New York and Colorado experiments confirmed for him that Radiant energy was bound up within the elusive ether, but could be made manifest by the creation of an abrupt disruption in the equilibrium of the ether fractions using one way, high magnitude pulses of short duration.

This was the key that unlocked Radiant Energy.

“See the excitement coming!”

These were the words that Tesla used at the end of his pivotal 1892 December lecture, “The Dissipation of Electricity”. He was brimming over with buoyancy and optimism for the future. In the 1890's, Tesla conducted a large number of experiments which confirmed his theory and refined his understanding of the special conditions required for Radiant energy to express itself. He later expanded his New York work with the large scale experimental trials conducted at Colorado Springs, Colorado in 1899. Tesla, the humanitarian, wanted more than anything to share this enormous discovery with his fellow man. Tesla spoke of practical applications of radiant energy that were so wide reaching that they could have created a profound and immense leap into the future for all of mankind in practically every sector of daily life:

Unlimited electricity could be made available anywhere and at any time, by merely pushing a rod into the ground and turning on the electrical appliance. Homes, farms, offices, factories, villages, libraries, museums, street lights, etc., could have all their lighting needs met by merely hanging ordinary light bulbs or fluorescent tubes anywhere desired- without the need for wiring -and produce brilliant white light 24 hours a day. Motor energy for any imagined use such as industrial applications, transportation, tractors, trucks, trains, boats, automobiles, air ships or planes could be powered freely-anywhere on the planet from a single Magnifying Transmitter. This new form of energy even had the ability to elevate human consciousness to levels of vastly improved comprehension and mental clarity. Undreamed of therapeutic applications to improve human health and to eliminate disease conditions could have been achieved fully 100 years ago had Tesla been allowed to complete his commercial development of Radiant Energy. But powerful barons of industry, chiefly in the person of John Pierpont Morgan, colluded to deny him the financial backing he needed and in doing so, effectively denied mankind one of Nature's most abundant and inexhaustible gifts of free energy.

#### The Magnifying Transmitter

The closest Tesla came to a world wide industrial application of his Radiant Energy dream was the construction of his huge Magnifying Transmitter at Shoreham, Long Island, a site which he named Wardencllyffe. Following his return to New York City from Colorado Springs in 1899, Tesla was jubilant and full of enthusiasm to implement his plan for the commercial application of Radiant energy. He turned to JP Morgan for a substantial portion of the funding to finance the huge project at Wardencllyffe. Morgan was chiefly concerned with turning a profit from overseas radio transmissions since Marconi was fast locking up the market and Morgan, ever the aggressor, wanted a share of the market. When Tesla told him that the transmitter could transmit “intelligence” to the world, Morgan assumed that he meant ordinary radio communications, but Tesla was not referring to ordinary radio transmissions. He was talking about something much bigger, but avoided revealing all to Morgan during this early phase of the Wardencllyffe project. Some considerable time later, Tesla eventually felt compelled to tell Morgan the larger possibilities offered by the Magnifying Transmitter when he needed more funding to complete the project. Tesla thought that Morgan would be overwhelmed by his expanded explanation of the true capacities of the transmitter and would be anxious to complete the work, but Tesla's assumption had backfired and Morgan refused to lay out any more money for the transmitter. Sadly, the enormous benefits that could have been made available to society by Tesla's Magnifying Transmitter project, died then and there.

#### Morgan & Westinghouse

Morgan had already orchestrated circumstances in Tesla's life in order to force Tesla to be dependent on him for financial backing. During an earlier period, when Tesla himself had millions from his Polyphase AC generator royalty payments and other earnings, Morgan wanted to woo Tesla with a deal that effectively gave Morgan majority control over his patent rights and projects, but Tesla turned him down, telling Morgan that he had enough money of his own to fund his projects. While returning to his hotel from that very meeting with Morgan, however, Tesla was told that his laboratory had been burned to the ground. It represented a tremendous loss to Tesla and it shook him deeply. Everyone, of course, felt convinced that Morgan was behind the arson. In order to save face, Morgan was embarrassed by Tesla into putting up the money to pay for the rebuilding of a new lab as an act of “philanthropy”. From that time forward, however, other financial backers were not to be found. Morgan was powerful enough to black list Tesla among the Eastern Establishment elites that previously had hobnobbed and feted with Tesla as if he was one of their own. Black listing and ostracization by officialdom and financiers lifted somewhat after Morgan's death, but generally continued to haunt Tesla for the rest of his life.

Before the turn of the century, Tesla also willingly gave up millions, perhaps billions, in royalty earnings to George Westinghouse in an unprecedented act of friendship. Westinghouse had believed in the superiority of Tesla's AC system and provided the money to build Tesla's big AC generators at Niagra Falls, NY. Tesla was paid millions up front for his patents, but was also due to receive royalty earnings for every kilowatt of power produced. When Westinghouse ran into financial difficulties at a later date, Tesla tore up his royalty contract in order to save Westinghouse from financial ruin.

Had he not done that, Tesla would have had enough money from royalties to keep him ensconced in great wealth for the rest of his life.

The story is frequently told that when Morgan found out from Tesla that the true purpose of the Wardenclyffe transmitter was to provide free electricity to the world, he abruptly pulled the funding. That's not completely accurate. The economic conditions were recessionary at the time and the stock market had taken a considerable dip that year. Morgan wasn't interested in risking any more capital in perilous times on a project he couldn't fully fathom and wasn't completely convinced of. Tesla held land ownership of the Wardenclyffe site and tower, but no further work was done after 1910. In 1914, Tesla was deeply in debt and signed over the deed of Wardenclyffe Station to pay off years of back rent due to the owners of the New Yorker Hotel where he was living (he occupied two penthouse suites in the hotel). In 1917, the hotel owners had the tower demolished and its parts sold for salvage. Despite the loss of Wardenclyffe, Tesla continued to refine his understanding of Radiant Energy and miniaturize the equipment needed to produce it. He eventually was able to reduce the equipment down to the size of a suit case.

## Where in the World is all the Free Energy?

The spread of working free-energy technologies has been prevented by wealthy elites governments, deluded inventors and con men, as well as a non-demanding public.

In the late 1880s, trade journals in the electrical sciences were predicting "free electricity" in the near future. Incredible discoveries about the nature of electricity were becoming commonplace. Nikola Tesla was demonstrating "wireless lighting" and other wonders associated with high-frequency currents. There was an excitement about the future like never before.

Within 20 years there would be automobiles, airplanes, movies, recorded music, telephones, radio and practical cameras. The Victorian age was giving way to something totally new. For the first time in history, common people were encouraged to envision a utopian future filled with abundant modern transportation and communication as well as jobs, housing and food for everyone. Disease would be conquered and so would poverty. Life was getting better, and this time everyone was going to get "a piece of the pie".

So what happened? In the midst of this technological explosion, where did the energy breakthroughs go? Was all of this excitement about "free electricity", which happened just before the beginning of the last century, just wishful thinking that "real science" eventually disproved?

### CURRENT STATE OF TECHNOLOGY

Actually, the answer to that question is "No". In fact, the opposite is true. Spectacular energy technologies were developed right along with the other breakthroughs. Since that time, multiple methods for producing vast amounts of energy at extremely low cost have been developed. None of these technologies has made it to the "open" consumer market as an article of commerce, however. Exactly why this is true will be discussed shortly.

But first, I would like to describe to you a short list of "free energy" technologies that I am currently aware and that are proven beyond all reasonable doubt. The common feature connecting all of these discoveries is that they use a small amount of one form of energy to control or release a large amount of a different kind of energy. Many of them in some way tap the underlying aether field--a source of energy conveniently ignored by "modern" science.

#### 1. Radiant Energy

Nikola Tesla's Magnifying Transmitter, T. Henry Moray's Radiant Energy Device, Edwin Gray's EMA Motor and Paul Baumann's Testatika Machine all run on "radiant energy". This natural energy form (mistakenly called "static" electricity) can be gathered directly from the environment or extracted from ordinary electricity by the method called "fractionation". Radiant energy can perform the same wonders as ordinary electricity, at less than 1% of the cost. It does not behave exactly like electricity, however, and this has contributed to the scientific community's misunderstanding of it. The Methernitha Community in Switzerland currently has five or six working models of fuelless, self-running devices that tap this energy.

## 2. Permanent-Magnet-Powered Motors

Dr Robert Adams (New Zealand) has developed astounding designs of electric motors, generators and heaters that run on permanent magnets. One such device draws 100 watts of electricity from the source, generates 100 watts to recharge the source and produces over 140 BTUs of heat in two minutes!

Dr Tom Bearden (USA) has two working models of a permanent-magnet-powered electrical transformer. It uses a 6-watt electrical input to control the path of a magnetic field coming out of a permanent magnet. By channelling the magnetic field, first to one output coil and then to a second output coil, and by doing this repeatedly and rapidly in a "ping-pong" fashion, the device can produce a 96-watt electrical output with no moving parts. Bearden calls his device a Motionless Electromagnetic Generator, or MEG. Jean-Louis Naudin has duplicated Bearden's device in France. The principles for this type of device were first disclosed by Frank Richardson (USA) in 1978.

Troy Reed (USA) has working models of a special magnetised fan that heats up as it spins. It takes exactly the same amount of energy to spin the fan, whether it is generating heat or not.

Beyond these developments, multiple inventors have identified working mechanisms that produce motor torque from permanent magnets alone.

## 3. Mechanical Heaters

There are two classes of machines that transform a small amount of mechanical energy into a large amount of heat.

The best of these purely mechanical designs are the rotating cylinder systems designed by Frenette (USA) and Perkins (USA). In these machines, one cylinder is rotated within another cylinder with about an eighth of an inch of clearance between them. The space between the cylinders is filled with a liquid such as water or oil, and it is this "working fluid" that heats up as the inner cylinder spins.

Another method uses magnets mounted on a wheel to produce large eddy currents in a plate of aluminium, causing the aluminium to heat up rapidly. These magnetic heaters have been demonstrated by Muller (Canada), Adams (NZ) and Reed (USA).

All of these systems can produce 10 times more heat than standard methods using the same energy input.

## 4. Super-Efficient Electrolysis

Water can be broken into hydrogen and oxygen using electricity. Standard chemistry books claim that this process requires more energy than can be recovered when the gases are recombined. This is true only under the worst-case scenario.

When water is hit with its own molecular resonant frequency, using a system developed by Stan Meyer (USA) and again recently by Xogen Power, Inc., it collapses into hydrogen and oxygen gas with very little electrical input. Also, using different electrolytes (additives that make the water conduct electricity better) changes the efficiency of the process dramatically. It is also known that certain geometric structures and surface textures work better than others do. The implication is that unlimited amounts of hydrogen fuel can be made to drive engines (like in your car) for the cost of water.

Even more amazing is the fact that a special metal alloy was patented by Freedman (USA) in 1957, which spontaneously breaks water into hydrogen and oxygen with no outside electrical input and without causing any chemical changes in the metal itself. This means that this special metal alloy can make hydrogen from water, for free, forever.

## 5. Implosion/Vortex Engines

All major industrial engines use the release of heat to cause expansion and pressure to produce work, like in your car engine. Nature uses the opposite process of cooling to cause suction and vacuum to produce work, like in a tornado. Viktor Schauberger (Austria) was the first to build working models of Implosion Engines in the 1930s and 1940s. Since that time, Callum Coats has written extensively on Schauberger's work in his book *Living Energies*, and subsequently a number of researchers have built working models of Implosion Turbine Engines. These are fuelless engines that produce mechanical work from energy accessed from a vacuum. There are also much simpler designs that use vortex motions to tap a combination of gravity and centrifugal force to produce a continuous motion in fluids.

## 6. Cold Fusion Technology

In March 1989, two chemists, Martin Fleischmann and Stanley Pons, from Brigham Young University, Utah (USA), announced that they had produced atomic fusion reactions in a simple tabletop device. The claims were "debunked" within six months and the public lost interest.

Nevertheless, cold fusion is very real. Not only has excess heat production been repeatedly documented, but also low-energy atomic element transmutation has been catalogued, involving dozens of different reactions! This technology definitely can produce low-cost energy and scores of other important industrial processes.

## 7. Solar-Assisted Heat Pumps

The refrigerator in your kitchen is the only "free energy machine" you currently own. It's an electrically operated heat pump. It uses one amount of energy (electricity) to move three amounts of energy (heat). This gives it a "co-efficient of performance" (COP) of about three. Your refrigerator uses one amount of electricity to pump three amounts of heat from the inside of the refrigerator to the outside of the refrigerator. This is its typical use, but it is the worst possible way to use the technology. Here's why.

A heat pump pumps heat from the "source" of heat to the "sink" or place that absorbs the heat. The "source" of heat should obviously be hot and the "sink" for heat should obviously be cold for this process to work the best. In your refrigerator, it's exactly the opposite. The "source" of heat is inside the box, which is cold, and the "sink" for heat is the room temperature air of your kitchen, which is warmer than the source. This is why the COP remains low for your kitchen refrigerator. But this is not true for all heat pumps.

COPs of 8 to 10 are easily attained with solar-assisted heat pumps. In such a device, a heat pump draws heat from a solar collector and dumps the heat into a large underground absorber, which remains at 55°F (12.78°C); mechanical energy is extracted in the transfer. This process is equivalent to that of a steam engine that extracts mechanical energy between the boiler and the condenser, except that it uses a fluid which "boils" at a much lower temperature than water.

One such system, tested in the 1970s, produced 350 hp, measured on a dynamometer, in a specially designed engine from just 100 square feet of solar collector. (This is not the system promoted by Dennis Lee.) The amount of energy it took to run the compressor (input) was less than 20 hp, so this system produced more than 17 times more energy than it took to keep it going! It could power a small neighbourhood from the roof of a hot-tub gazebo, using exactly the same technology that keeps the food cold in your kitchen.

Currently there is an industrial-scale heat pump system set up just north of Kona, Hawaii, which generates electricity from temperature differences in ocean water.

There are dozens of other systems that I have not mentioned, and many of them are as viable and well tested as the ones I have just recounted.

But this short list is sufficient to make my point: free energy technology is here, now. It offers the world pollution-free, energy abundance for everyone, everywhere.

It is now possible to stop the production of "greenhouse gases" and shut down all of the nuclear power plants. We can now desalinate unlimited amounts of seawater at an affordable price and bring adequate fresh water to even the most remote habitats. Transportation and production costs for just about everything can drop dramatically. Food can even be grown in heated greenhouses in the winter, anywhere.

All of these wonderful benefits that can make life on this planet so much easier and better for everyone have been postponed for decades. Why? Whose purposes are served by this postponement?

### UNSEEN ENEMIES OF FREE ENERGY TECHNOLOGY

There are four gigantic forces that have worked together to create this situation. To say that there is and has been a "conspiracy" to suppress this technology only leads to a superficial understanding of the world and it places the blame for this completely outside of ourselves. Our willingness to remain ignorant and actionless in the face of this situation has always been interpreted by two of these forces as "implied consent".

So, besides "a non-demanding public", what are the other three forces impeding the availability of free energy technology?

#### 1. The Money Monopoly

In standard economic theory, there are three classes of industry: capital, goods and services. Within the first class, capital, there are also three sub-classes: natural capital, currency and credit. Natural capital relates to raw materials (such as a gold mine) and sources of energy (such as an oil well or hydroelectric dam). Currency relates to the printing of paper "money" and the minting of coins; these functions are usually the job of government. Credit relates to the lending of money for interest and its extension of economic value through deposit loan accounts. From this, it is easy to see that energy functions in the economy in the same way as gold, the printing of money by the government or the issuing of credit by a bank.

In the United States, and in most other countries around the world, there is a "money monopoly" in place. I am "free" to earn as much "money" as I want, but I will only be paid in Federal Reserve notes. There is nothing I can do to be paid in gold certificates or some other form of "money". This money monopoly is solely in the hands of a small number of private stock banks, and these banks are owned by the wealthiest families in the world. Their plan is eventually to control 100 per cent of all the capital resources of the world and thereby control everyone's life through the availability (or non-availability) of all goods and services. An independent source of wealth (a free energy device) in the hands of each and every person in the world would ruin their plans for world domination, permanently. Why this is true is easy to see.

Currently, a nation's economy can be either slowed down or sped up by the raising or lowering of interest rates. But if an independent source of capital (energy) were present in the economy, and any business or person could raise more capital without borrowing it from a bank, this centralised throttling action on interest rates would simply not have the same effect. Free energy technology changes the value of money. The wealthiest families and the issuers of credit do not want any competition. It's that simple. They want to maintain their current monopoly control of the money supply. For them, free energy technology is not just something to suppress, it must be permanently forbidden!

So, the wealthiest families and their central banking institutions are the first force operating to postpone the public availability of free energy technology. Their motivations are the imagined "divine right to rule", greed and their insatiable need to control everything except themselves. The weapons they have used to enforce this postponement include intimidation, "expert" debunkers, buying and shelving of technology, murder and attempted murder of the inventors, character assassination, arson and a wide variety of financial incentives and disincentives to manipulate possible supporters. They have also promoted the general acceptance of a scientific theory that states that free energy is impossible (the laws of thermodynamics).

## 2. National Governments

The second force operating to postpone the public availability of free energy technology is national governments. The problem here is not so much related to competition in the printing of currency but the maintenance of "national security".

The fact is, the world out there is a jungle and humans can be counted upon to be very cruel, dishonest and sneaky. It is government's job to "provide for the common defence". For this, "police powers" are delegated by the executive branch of government to enforce "the rule of law". Most of us who consent to the rule of law do so because we believe it is the right thing to do, for our own benefit. However, there are always a few individuals who believe that their own benefit is best served by behaviour that does not voluntarily conform to the generally agreed upon social order. These people choose to operate outside of "the rule of law" and are considered outlaws, criminals, subversives, traitors, revolutionaries or terrorists.

Most national governments have discovered by trial and error that the only foreign policy that really works over time is a policy called "tit for tat". What this means to you and me is that governments treat each other the way they are being treated. There is a constant "jockeying" for position and influence in world affairs, and the "strongest" party wins! In economics it's called "the Golden Rule", which states that "the one with the gold makes the rules". So it is with politics, also, but its appearance is more Darwinian. It's simply "survival of the fittest".

In politics, however, the "fittest" has come to mean the strongest party that is also willing to fight the dirtiest. Absolutely every means available is used to maintain an advantage over the "adversary", and everyone else is the "adversary" regardless of whether they are considered friend or foe. This includes outrageous psychological posturing, lying, cheating, spying, stealing, assassination of world leaders, proxy wars, alliances and shifting alliances, treaties, foreign aid and the presence of military forces wherever possible.

Like it or not, this is the psychological and actual arena in which national governments operate. No national government will ever do anything that gives an adversary an advantage simply for free. Never! It's national suicide. Any activity by any individual, inside or outside the country, which is interpreted as giving an adversary an edge or advantage in any way, will be deemed a threat to "national security". Always!

Free energy technology is a national government's worst nightmare! Openly acknowledged, free energy technology sparks an unlimited arms race by all governments in a final attempt to gain absolute advantage and domination. Think about it. Do you think Japan will not feel intimidated if China gets free energy? Do you think Israel will sit by quietly as Iraq

acquires free energy? Do you think India will allow Pakistan to develop free energy? Do you think the USA would not try to stop Osama bin Laden from getting free energy?

Unlimited energy available in the current state of affairs on this planet will lead to an inevitable reshuffling of the "balance of power". This could become an all-out war to prevent "the other" from having the advantage of unlimited wealth and power. Everybody will want it, and at the same time will want to prevent everyone else from getting it.

So, national governments are the second force operating to postpone the public availability of free energy technology. Their motivation is "self-preservation". This self-preservation operates on three levels: first, by not giving undue advantage to an external enemy; second, by preventing individualised action (anarchy) capable of effectively challenging official police powers within the country; and third, by preserving income streams derived from taxing energy sources currently in use.

Their weapons include preventing the issuance of patents on national security grounds, and the legal and illegal harassment of inventors with criminal charges, tax audits, threats, phone taps, arrest, arson, theft of property during shipment, and a host of other intimidations which make the business of building and marketing a free energy machine impossible.

### 3. Delusion and Dishonesty in the FE Movement

The third force operating to postpone the public availability of free energy technology consists of the group of deluded inventors and outright charlatans and con men. On the periphery of the extraordinary scientific breakthroughs that constitute the real free energy technologies lies a shadow world of unexplained anomalies, marginal inventions and unscrupulous promoters. The first two forces have constantly used the media to promote the worst examples of this group, to distract the public's attention and to discredit the real breakthroughs by associating them with the obvious frauds.

Over the last 100 years, dozens of stories have surfaced about unusual inventions. Some of these ideas have so captivated the public's imagination that a mythology about these systems continues to this day. Names like Keely, Hubbard, Coler and Hendershot immediately come to mind. There may be real technologies behind these names, but there simply isn't enough technical data available in the public domain to make a determination. These names remain associated with a free energy mythology, however, and are cited by debunkers as examples of fraud. But the idea of free energy taps very deeply into the human subconscious mind.

However, a few inventors with marginal technologies that demonstrate useful anomalies have mistakenly exaggerated the importance of their invention. Some of these inventors also have mistakenly exaggerated the importance of themselves for having invented it. A combination of "gold fever" and/or a "Messiah complex" appears, wholly distorting any future contribution they may make. While the research thread they are following may hold great promise, they begin to trade enthusiasm for facts, and the value of the scientific work from that point on suffers greatly. There is a powerful yet subtle seduction that can warp a personality if they believe that "the world rests on their shoulders" or that they are the world's "saviour".

Strange things also happen to people when they think they are about to become extremely rich. It takes a tremendous spiritual discipline to remain objective and humble in the presence of a working free energy machine. Many inventors' psyches become unstable by the inventors' just believing they have a free energy machine. As the quality of the science deteriorates, some inventors also develop a "persecution complex" that makes them very defensive and unapproachable. This process precludes them from ever really developing a free energy machine, and fuels the fraud mythologies tremendously.

Then there are the outright con men. In the last 15 years, there is one person in the USA who has raised the free energy con to a professional art. He has raised more than US\$100,000,000, has been barred from doing business in the state of Washington, has been jailed in California, and he's still at it. He always talks about a variation of one of the real free energy systems, sells people on the idea that they will get one of these systems soon, but ultimately sells them only promotional information that gives no real data about the energy system itself. He has mercilessly preyed upon the Christian and Patriot communities in the USA and is still going strong.

This person's current scam involves signing up hundreds of thousands of people for locations where he will install a free energy machine. In exchange for letting him put the FE generator in their home, they will get free electricity for life and his company will sell the excess energy back to the local utility company. After becoming convinced that they will receive free electricity for life, with no out-front expenses, they gladly buy a video--which helps draw their friends into the scam as well. Once you understand the power and motivations of the first two forces I have discussed, it is obvious that this person's current "business plan" cannot be implemented. This one person has probably done more harm to the free energy movement in the USA than any other force, by destroying people's trust in the technology.

So, the third force postponing the public availability of free energy technology is delusion and dishonesty within the movement itself. The motivations are self-aggrandisement, greed, want of power over others and a false sense of self-importance. The weapons used are lying, cheating, the "bait and switch" con, self-delusion and arrogance, combined with lousy science.

#### 4. A Non-Demanding Public

The fourth force operating to postpone the public availability of free energy technology is all of the rest of us. It may be easy to see how narrow and despicable the motivations of the other forces are, but actually these motivations are still very much alive in each of us as well.

Like the wealthiest families, don't we each secretly harbour illusions of false superiority and the want to control others instead of ourselves? Also, wouldn't we "sell out" if the price were high enough--say, take \$1 million dollars in cash, today? Or, like the governments, don't we each want to ensure our own survival? If caught in the middle of a full, burning theatre, do we panic and push all the weaker people out of the way in a mad scramble for the door? Or, like the deluded inventor, don't we trade a comfortable illusion once in a while for an uncomfortable fact? And don't we like to think more of ourselves than others give us credit for? Or don't we still fear the unknown, even if it promises a great reward?

You see, really, all four forces are just different aspects of the same process, operating at different levels in the society. There is really only one force preventing the public availability of free energy technology, and that is the unspiritually motivated behaviour of the human animal. In the last analysis, free energy technology is an outward manifestation of Divine Abundance. It is the engine of the economy of an enlightened society--where people voluntarily behave in a respectful and civil manner towards each other; where each member of the society has everything they need and does not covet what their neighbour has; where war and physical violence are socially unacceptable behaviours; and where people's differences are at least tolerated, if not enjoyed.

The appearance of free energy technology in the public domain is the dawning of a truly civilised age. It is an epochal event in human history. Nobody can "take credit" for it. Nobody can "get rich" on it. Nobody can "rule the world" with it. It is, simply, a gift from God. It forces us all to take responsibility for our own actions and for our own self-disciplined self-restraint when needed. The world as it is currently ordered cannot have free energy technology without being totally transformed by it into something else. This "civilisation" has reached the pinnacle of its development because it has birthed the seeds of its own transformation. The unspiritualised human animals cannot be trusted with free energy. They will only do what they have always done, which is take merciless advantage of each other or kill each other and themselves in the process.

If you go back and read Ayn Rand's Atlas Shrugged (1957) or the Club of Rome's report, The Limits To Growth (1972), it becomes obvious that the wealthiest families have understood this for decades. Their plan is to live in "the world of free energy" but permanently freeze the rest of us out. But this is not new. Royalty has usually always considered the general population (us) to be their subjects. What is new is that you and I can now communicate with each other better than at any time in the past. The Internet offers us, the fourth force, an opportunity to overcome the combined efforts of the other forces that are preventing the spread of free energy technology.

### THE OPPORTUNITY FOR A JUST SOCIETY

What is starting to happen is that inventors are publishing their work instead of patenting it and keeping it secret. More and more, people are "giving away" information on these technologies in books, videos and websites. While there is still a great deal of useless information about free energy on the Internet, the availability of good information is rising rapidly. Check out the list of websites and other resources at the end of this article.

It is imperative that you begin to gather all the information you can on real free energy systems. The reason for this is simple. The first two forces will never allow an inventor or a company to build and sell a free energy machine to you! The only way you will ever get one is if you build it yourself (or get a friend to build it). This is exactly what thousands of people are already quietly starting to do. You may feel wholly inadequate to the task, but start gathering information now. You may be just a link in the chain of events for the benefit of others. Focus on what you can do now, not on how much is still to be done. Small private research groups are working out the details as you read this. Many are committed to publishing their results on the Internet.

All of us constitute the fourth force. If we stand up and refuse to remain ignorant and actionless, we can change the course of history. It is the aggregate of our combined action that can make a difference. Only the mass action that represents our consensus can create the world we want. The other three forces will not help us put a fuelless power plant in our basement. They will not help us be free from their manipulations.

Nevertheless, free energy technology is here. It is real, and it will change everything about the way we live, work and relate to each other. In the last analysis, free energy technology makes greed and the fear for survival obsolete. But like all exercises of spiritual faith, we must first manifest the generosity and trust in our own lives.

The source of free energy is inside of us. It is that excitement of expressing ourselves freely. It is our spiritually guided intuition expressing itself without distraction, intimidation or manipulation. It is our open-heartedness. Ideally, the free energy technologies underpin a just society where everyone has enough food, clothing, shelter, self-worth and the leisure time to contemplate the higher spiritual meanings of life. Do we not owe it to each other to face down our fears and take action to create this future for our children's children? Perhaps I am not the only one waiting to act on a greater Truth.

Free energy technology is here. It has been here for decades. Communications technology and the Internet have torn the veil of secrecy off this remarkable fact. People all over the world are starting to build free energy devices for their own use. The bankers and the governments do not want this to happen but cannot stop it. Tremendous economic instabilities and wars will be used in the near future to distract people from joining the free energy movement. There will essentially be no major media coverage of this aspect of what is going on. It will simply be reported as wars and civil wars erupting everywhere, leading to UN "peacekeeper" occupation in more and more countries.

Western society is spiralling down towards self-destruction due to the accumulated effects of long-term greed and corruption. The general availability of free energy technology cannot stop this trend. It can only reinforce it. However, if you have a free energy device, you may be better positioned to survive the political/social/economic transition that is underway. No national government will survive this process. The question is, who will ultimately control the emerging World Government: the first force or the fourth force?

The last Great War is almost upon us. The seeds are planted. After this will come the beginning of a real civilisation. Some of us who refuse to fight will survive to see the dawn of the world of free energy. I challenge you to be among the ones who try.

#### About the Author:

Peter Lindemann, DSc, became interested in Free Energy in 1973 when he was introduced to the work of Edwin Gray. By 1981 he had developed his own free energy systems based on variable reluctance generators and pulsed motor designs. During the 1980s he worked off and on with both Bruce DePalma and Eric Dollard. In 1988 he joined the board of Borderland Sciences Research Foundation and served until 1999. During this period he authored more than 20 articles for *The Journal of Borderland Research*.

Dr Lindemann is a leading authority on the practical applications of aether technology and cold electricity. Currently he is a Research Associate of Dr Robert Adams in New Zealand, as well as a close collaborator with Trevor James Constable in the USA. He is also Director of Research for Clear Tech, Inc. in the USA.

Dr Lindemann's book, *The Free Energy Secrets of Cold Electricity*, is reviewed in this issue; the companion video was reviewed last issue (8/03). Both are available from Clear Tech, Inc., [www.free-energy.cc](http://www.free-energy.cc), and Adventures Unlimited, [www.adventuresunlimitedpress.com](http://www.adventuresunlimitedpress.com), in the USA.

#### Resources: Patents

Most of these patents can be viewed at [www.delphion.com/](http://www.delphion.com/). This is a sample of inventions that produce free energy:

- € Tesla: USP #685,957 (1901)
- € Freedman: USP #2,796,345 (1957)
- € Richardson: USP #4,077,001 (1978)
- € Frenette: USP #4,143,639 (1979)
- € Perkins: USP #4,424,797 (1984)
- € Gray: USP #4,595,975 (1986)
- € Meyer: USP #4,936,961 (1990)
- € Chambers (Xogen): USP #6,126,794 (1998).
