

NetPrint for Windows® CE

NetPrint for Windows CE provides network printing functionality for handheld PCs and Windows-based Terminals powered by the Windows CE operating system. NetPrint users are able to access any network printer from their Windows CE-powered device—with the same functionality they have from the desktop—to print documents from any Windows CE-based application. For example, Pocket Word and Pocket Excel documents can be printed directly from a handheld device via any network printer. In addition, NetPrint works seamlessly with FutureSoft's DynaComm Connectivity Series for Windows CE (DCS/CE). The use of NetPrint in conjunction with these applications facilitates the use of Windows CE-powered devices as enterprise computing appliances rather than simply desktop companions.

Product Overview

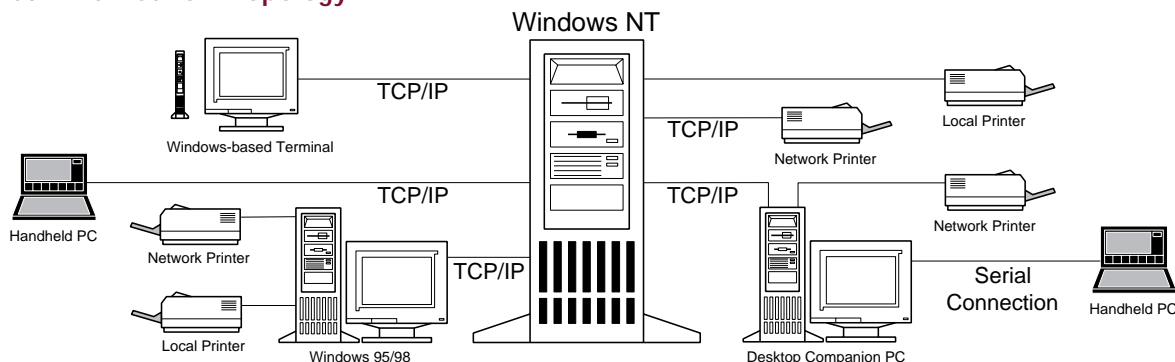

NetPrint is comprised of client components for Windows CE-based devices and server components for Windows NT 4.0 or Windows NT Server, Terminal Server Edition. NetPrint runs on devices powered by Windows CE 2.0 and greater and includes print support for:

- ❖ Any Windows CE-based application utilizing standard Windows print support
- ❖ Multiple print servers and multiple printers per server
- ❖ Any Windows NT 4.0-compliant printer
- ❖ Any TCP/IP connection including:
 - Serial cable hookup to host PC (LAN card not required)
 - Dial-up modem into network (LAN card not required)
 - LAN card for direct network access

Additionally, NetPrint offers:

- ❖ Point and click selection of any defined network printers
- ❖ Network printing capability without the need for Windows CE-based print drivers
- ❖ Centralized print administration and management for all Windows CE-based devices via the Windows NT control panel
- ❖ One universal print driver residing on the client, eliminating the need to store multiple drivers
- ❖ Small footprint of approximately 50K bytes on the client device
- ❖ Server software component which runs as a Windows NT Service

NetPrint Network Topology
