Industry support of the IBM @server xSeries™ Telecommunications Servers

"The New Public Network is defined by openness and interoperability. Communications carriers are looking for innovation--and that means the freedom to choose best-of-breed hardware and software solutions--whether that's from a pioneering softswitch company like Convergent Networks, or an established leader like IBM. The new IBM @server xSeries telecommunications portfolio delivers the kind of compelling performance, value and reliability that carriers demand."

Akshay Sharma, Director of Product Management, Convergent Networks

"The IBM Linux® Service Provider Lab enables the IP network environment to prove the carrier-grade reliability of the Linux operating system as a platform to support revenue generating wireline, wireless and Internet services built on Signalware, our industry leading signaling software."

Shawn Osborne, President and CEO, Ulticom, Inc.
