

*IBM Netfinity and  
Microsoft Windows 2000  
Software Solutions Guide*

**Dear reader,**

Welcome to the second edition of the IBM Netfinity® server and Windows® 2000 Solutions Guide, designed to help you find the right Microsoft Windows 2000 solution. All the software that is featured in this guide has been validated on IBM Netfinity servers running Windows 2000<sup>1</sup>. In 1999, IBM had over 1,000 ServerProven™ solutions, and this year we are striving to provide you with an even broader level of reliability and support information for specific applications with the next generation Windows 2000 operating system.

IBM has invested in 11 Solution Partnership Centers around the globe. These Centers work with independent software vendors to validate their applications on the IBM Netfinity platform. If you are a solution provider and would like to find out more, visit our Web site at [www.developer.ibm.com/welcome/netfinity/w2k](http://www.developer.ibm.com/welcome/netfinity/w2k)

We hope you find the information valuable as you explore Microsoft solutions on IBM Netfinity systems.

Sandy Carter

For an on-line version of the Solutions Guide please visit our website at [www.pc.ibm.com/ww/netfinity/alliances/windows](http://www.pc.ibm.com/ww/netfinity/alliances/windows)

## *AccountMate*

Offering a full-featured 32-bit financial information application, AccountMate® Software Corporation provides advanced enterprise management software to a wide variety of businesses, including manufacturing and distribution. With available source code, the software can be modified to meet a business' specific needs, and these modifications can move easily across version upgrades.

Optimizing the IBM Netfinity technologies, Visual AccountMate®/SQL, AccountMate's flagship product, provides exceptional reliability and stability—as well as meshing seamlessly with the perfect hardware platform for e-commerce.

Visual AccountMate/SQL will be among the first Windows 2000 Certified applications, further serving AccountMate's commitment to delivering the highest value available to the small and mid-size business market. AccountMate has long-standing technical and corporate relationships with both Microsoft and IBM, meaning your Visual AccountMate purchase has been thoroughly tested-and re-tested—so you can concentrate on your business and count on your financial information software to be a reliable tool for improving your profits.

## *Adonix: a world-class ERP designed for midsize companies*

ADONIX® develops and markets innovative enterprise business application systems which address corporate needs in Finance, Accounting, Sales, Purchasing, Manufacturing, Distribution and Logistics.

ADONIX has released a new Enterprise Resource Planning (ERP) system, Adonix X3™. Highly functional, Adonix X3 is engineered to be easier to install and maintain, easier to personalise and extend, and easier to use than traditional ERPs, thereby saving time and costs, and reducing implementation risks. Adonix X3 is particularly well suited to small and midsize companies which are more resource-constrained and risk intolerant, and usually have to compromise between essential functionality and potential cost when selecting a new ERP system.

## *Delivering on End-to-End e-Enabled Enterprise Solutions*

Baan® has worked closely with Microsoft® and IBM over the past few years to turn our common view of enterprise computing into a reality.

Baan enterprise solutions coupled with Microsoft technology brings customers the building blocks necessary for a comprehensive Digital Nervous System—available to any business of any size.

By combining this application framework with Netfinity® servers' powerful processing ability, a world-class enterprise solution is created for our joint customers.

BaanERP 5.0c is one of the first enterprise-class applications to be directory-enabled on the Microsoft Windows 2000® operating system, making Baan, Microsoft and IBM Netfinity servers a winning combination for any customer.

# *Cognos Enterprise Business Intelligence Solution*

IBM provides the perfect platform with Netfinity servers, the affordable enterprise server for Windows 2000 that delivers the power, control, and the availability needed to run demanding OLAP and enterprise applications. And the Cognos® enterprise business intelligence solution offers the world's most complete front-end coverage for the Microsoft SQL Server™ and Microsoft BackOffice® environment.

Running on the Netfinity 7000 series through to the Netfinity 3500 M10, Cognos' BI solution:

- Delivers the highest productivity gains to the user, and the most manageable solution to the administrator
- Provides immediate value from your SQL Server 7.0 investment
- Is for any type of user on the Web or Windows client

The Cognos logo consists of the word "COGNOS" in a bold, red, sans-serif font. The letter "O" is stylized with a white diagonal line passing through it from the bottom-left to the top-right. A registered trademark symbol (®) is located at the top right of the word.

## *Inktomi: Scaling the Internet*

Based in Foster City, Calif., Inktomi develops and markets scalable software designed for the world's largest Internet infrastructure and media companies. IBM and Inktomi are working together to deliver reliable Internet infrastructure solutions on the Intel processor-based platform to enterprise and ISPs customers alike.

The combination of the Inktomi Traffic Server product with the Netfinity X-architecture features of the server family offers a network cache platform designed to help Internet infrastructure and content providers scale their operations to meet rapidly growing demand and performance requirements. By embedding programmable intelligence into the network, Traffic Server and Content Delivery Suite provide a platform for ISPs, backbone companies, hosting providers, and enterprises to deliver new services to their customers network cache platform and associated value-added service applications. Inktomi works with leading companies including America Online, British Telecommunications, CNET, Excite@Home, Intel, RealNetworks and Yahoo!.

## *IBM Software Offerings for Windows 2000*

IBM software solutions offer database, collaboration, host connectivity and file sharing applications to help you gain a competitive edge. Our software applications extend the homogeneous model of Windows servers to the heterogeneous world that is the reality of most network enterprises today. And our programming model for e-business—the Application Framework for e-business—can help you leverage existing systems and skills investments to develop a new generation of applications. Our Application Framework for e-business combines cross-platform tools, standards-based software and a proven methodology that enables you to build a solid foundation for e-business on the platform of your choice. IBM Software Division also has a team of Windows 2000 experts—the IBM Windows 2000 Systems Manager team—helping IBM, Lotus and Tivoli software development labs to optimize their products for Windows 2000. IBM's goal is to ensure that our customers can exploit Windows 2000 features, such as Active Directory and Microsoft Management Console.

## *J.D. Edwards*

J. D. Edwards and IBM Netfinity have a strong partnership which includes Microsoft Windows NT and Windows 2000.

J. D. Edwards OneWorld solutions are both ServerProven and ClusterProven, validated to run optimally on Netfinity servers. This 3-way partnership was featured during the Microsoft Windows 2000 launch in San Francisco.

J. D. Edwards ERP solutions with Siebel CRM solutions are optimized for IBM Netfinity servers, offering the most powerful, integrated sales and customer services solutions for e-business and ERP back office needs.

J. D. Edwards Storefront solution features integration with IBM's WebSphere Commerce Suite, combining a rich e-commerce solution with the most flexible ERP OneWorld solution supported by highly available, scalable and reliable Netfinity servers.

## *Octopus: Before Disaster Strikes*

Legato Octopus® provides data protection for Microsoft Windows 2000 and Windows NT networks by replicating data to local and/or remote systems, providing data availability for mission-critical data in the event the data is damaged or destroyed at the primary location. Octopus allows the user to specify which drives, directories and/or files they wish to replicate and the target system where the replicated files will reside. Users can also configure failover options that allow the target system to assume the machine name and IP address of a failed source system.

Octopus replication can also provide added protection to data in a Microsoft Cluster Server® configuration. Octopus can be installed in a Microsoft Cluster and replicate data from the shared disk outside the cluster to another cluster or stand-alone system protecting the data if the disk is damaged.

Octopus data availability software recently received both ClusterProven™ and ServerProven™ validation and registration on IBM's Netfinity platform, making it the first distance replication software certified in both programs.

## *Lilly Software Associates: Common Sense Solutions in a Complex World*

Lilly Software Associates® offers a complete supply chain product line including VISUAL Manufacturing®, the first true Microsoft Windows-based, client/server solution for the manufacturing community. Lilly's US patented technology allows manufacturing organizations to schedule both materials and resources concurrently. IBM and Lilly have worked closely together to validate and optimize solutions through the Netfinity ServerProven program. As a Netfinity/Windows 2000 launch partner, Lilly's applications will take advantage of Netfinity X-architecture enhancements to deliver superior scalability and control.

# *Lotus Domino: The Power to Connect People - Easily, Securely and Reliably*

Lotus® intends to pursue Windows 2000 Professional and Windows 2000 Server logo certification as part of the next featured release of Lotus Notes® and Domino™. Specific areas of focus include Active Directory, security, the Windows installer, and internationalization. Lotus will support Notes and Domino R5 running on Windows 2000 Professional/Windows 2000 Server within 90 days of Windows 2000 general availability. Lotus has publicly committed to this support and is registered on the Windows 2000-ready listings on Microsoft's Web site ([www.microsoft.com/windows2000](http://www.microsoft.com/windows2000)). The Netfinity family of servers makes Internet communication and collaboration easier by including Lotus Domino Application Server, five Notes collaboration client licenses and five Web browser client access licenses with the purchase of most Netfinity systems before December 31, 2000. (Both IBM Netfinity and Lotus Domino have been working to ensure that customers can run Windows 2000 on this joint solution.)

## *Macola Software*

At Macola, we realize the importance of offering business solutions that provide the agility to meet the demands of today's changing marketplace. We offer an e-Business solution that integrates e-Commerce, BackOffice ERP and Customer Relationship Management. Our solutions are built upon superior business applications that maximize the power and stability of technologies like Microsoft 2000. Also, Macola's integration with the IBM Netfinity ServerProven program offers customers a complete solution including - software and a business system that has been tested for compatibility.

## *Navision: Keeping Pace with a Changing Business World*

As a member of IBM's ServerProven program, Navision® Software will be testing its applications on the Windows 2000 platform using Netfinity servers. The IBM ServerProven program and IBM Netfinity X-architecture give us the confidence that we're building our applications on a proven, reliable platform. Our mutual customers will benefit from having tested, tuned and optimized business solutions that will enable them to run their businesses now and into the future.

Navision Financials and IBM Netfinity servers are designed to move with the customer's business needs in times of growth and change. Such a partnership strengthens the capabilities of partners and customers. From Navision Software's point-of-view, this will increase the power of our unique business model. Navision and IBM will target the training of our business partners in pre-sales and technical support on this specific platform, which brings high-level know-how to our customers globally.

# *NetIQ AppManager Support for IBM Netfinity Clusters*

AppManager® Suite's functionality for IBM Netfinity Clusters running Microsoft Cluster Server includes proactive event detection, notification and correction, as well as real-time and historical performance monitoring and reporting for trend analysis. Some of the standard "out-of-the-box" monitoring functions provided by AppManager's cluster management capabilities include:

- automatic detection of cluster state changes
- monitoring if a cluster resource has changed its state
- determination if a cluster resource has been added, deleted or changed; and monitoring of the Windows NT Server Event Logs for cluster-specific error messages

The resulting solution lets MIS personnel use AppManager's central, easy-to-use console to not only manage distributed Windows NT-based applications such as Exchange Server and Lotus Domino, but also to let MIS personnel monitor IBM Netfinity system-specific hardware statistics such as computer temperature and status of network interface cards.

# *Oracle e-business Suite: Transforming the Way You Do Business*

Oracle® runs on all primary operating systems including Windows 2000. Oracle and IBM Netfinity servers have a strong partnership on Windows that encompasses Oracle's use of IBM Netfinity servers for base development on both the Oracle Applications System bundle and the I-Procurement System bundle. Oracle develops some of its Intel processor-based software on Netfinity 7000 M10 and 5500 M20 servers and, in addition, Oracle's e-Business Suite runs on all Netfinity servers.

With Oracle and Netfinity, a new model for business is taking shape—e-business—and it's built on the largest communications network on the planet, the Internet. Any business that hopes to survive—and thrive—must become an e-business.

## *Through Knowledge Comes Control*

Sage® is currently testing our industry-leading accounting, manufacturing and distribution software solutions for Windows 2000 compatibility on the IBM Netfinity platform. This promotes the best overall environment for testing because all of our applications have been tested to run with peak performance on Netfinity servers, including the Windows Installer, which is an exciting new feature to Windows 2000 that helps track components of applications. This means it will cleanly perform uninstall and removal tasks preventing damage to the performance of applications or the operating system. The Installer also manages all application file paths and ensures that no applications point to missing files—saving hours of troubleshooting and frustration. Sage will continue to leverage IBM's ServerProven program in an effort to provide our customers with the best opportunity to select a total solution that has been tested and proven. ServerProven solutions are optimized for Sage's specific applications and configurations, improving our time-to-market and simplifying our customers' purchasing decisions—allowing them to focus on running their business.

## *SAS Institute*

SAS® Institute, the leader in decision support and data warehousing, provides integrated enterprise information delivery and e-business solutions. Founded in 1976, the Institute markets packaged business solutions for vertical industry and departmental applications. An integrated suite of software tools and consulting services allows departments and agencies to transform the wide variety of data within their organizations into information that business users and researchers need to make better decisions. SAS software and services are used at more than 33,000 business, government, and university sites in 115 countries.

Recognizing the commitment our customers have made—and continue to make—to running SAS software on Netfinity servers, SAS Institute will support the new Microsoft Windows 2000 operating system offerings as they become available. The SAS System for Windows will be submitted for the Windows 2000 logo after production availability of the new operating system.

## *Solomon Software: Flexibility to Get You There, Faster*

By running their Solomon IV® business management systems on the Netfinity platform using Windows 2000, our customers will experience significant productivity breakthroughs: faster throughput, lower cost per transaction, and increased productivity. In addition, our small to mid-sized customers can benefit from the reliability and scalability of affordable Netfinity servers—traditionally only found in enterprise-class systems. As a partner with IBM for three years, and a pioneer member of the Netfinity ServerProven program, Solomon Software works closely with IBM on performance benchmarks, server sizing guides and logo certification for Windows 2000, including benchmarks and testing performed on Netfinity 3500 M10, Netfinity 5500 & Netfinity 7000 servers.

When customers chose a Windows 2000 solution from Solomon Software and IBM, they can be assured of lower risk, proven compatibility and high performance. Since Solomon IV is optimized exclusively for Microsoft platforms, customers gain the benefits built into Windows 2000 and SQL Server 7, including interoperability with existing business applications and a flexible architecture to customize Solomon IV.

# *Get a Grip on Your Storage*

*[www.getagripnit.com](http://www.getagripnit.com)*

W. Quinn Associates specializes in software solutions that allow you to take control of your Microsoft Windows NT/2000 storage. Our StorageCeNTral™ suite, which includes QuotaAdvisor and DiskAdvisor, is the only storage management tool that operates in real time to control and monitor disk space, report on storage content and monitor the health of your storage. StorageCeNTral prevents storage-related problems before they affect your server. Additionally, FileScreen 2000 is the first and only software solution to screen files by name and file type to keep them from being written to your Windows NT servers.

- StorageCeNTral—The most comprehensive storage management solution for Windows NT.
- QuotaAdvisor—Get back on top by monitoring, managing, and enforcing Windows NT storage limits at the user or group level.
- DiskAdvisor—Recover wasted space with the complete disk reporting solution available for Windows NT.
- FileScreen 2000—Take charge by keeping unwanted file types off your servers.
