

icom\_secret.txt

Icom resetting and repairing procedure.

Does your radio at turning on say "bee, bee, bee" than silent?

Or silent anyway? Display show error message ?

Yes, you have lost data at radio EEprom.

Don't panic ;- ) it's easy to repair...

1. Take a another radio, the same model.  
Read the radio by his RSS, than save it.
2. For Icom IC-f3, 3xx series: on the  
RSS window choose "model", than 'cursor down', than type "reserve",  
than enter...  
If you use a Windows RSS, click on HELP then ABOUT CS..  
Soon as you open that window , type on the PC keyboard: "reserve"  
Reserving indicator will blink at right hand.
3. Connect the broken radio, then hit "write radio".

Thank for Vladimir, who's told me about this "trick".

Best regards, MALE
