

Important Note for Using 018-1054-001 Video Cables with Silicon Graphics® Prism™ Systems

This document describes the use of 018-1054-001 video cables with your Silicon Graphics Prism system.

Using 018-1054-001 Video Cables

If you received 018-1054-001 cables with your system, you should always use them to connect your system's digital monitor(s). These cables are used with digital (flat panel) monitors only and are not intended for CRT (VGA) type monitors. Attach the first DVI-I connector to the graphics connector on the left side of the card. If you have an additional monitor, connect it to the right side connector using an 018-1054-001 cable.

See the Silicon Graphics Prism user's guide that came with your system if you need more information on connecting single or multiple monitors to your system. If you do not have the user's guide readily available you can download a copy from:

<http://docs.sgi.com>

Any additional graphics-to-monitor cables you received with your Silicon Graphics Prism shipment should be set aside or used with products other than your Silicon Graphics Prism.

SGI Customer Support

SGI provides a comprehensive product support and maintenance program for its products. If you are in North America and would like support for your SGI products, contact the Technical Assistance Center at 1 800 800 4SGI, or contact your authorized service provider. If you are outside North America, contact the SGI subsidiary or authorized distributor in your country.
