DIGITAL StorageWorks Command Console

Simple, centralized storage management that grows with you

Do you have more storage subsystems than you can handle—and more coming down the pike? With DIGITAL StorageWorks™ Command Console, you can configure, monitor, and manage all your network-connected subsystems at once. And easily add new storage in the future.

The StorageWorks Command Console reduces the arduous effort of storage management to simple point-and-click. It delivers an easy, efficient way to monitor, configure, and troubleshoot multiple StorageWorks storage subsystems—from a single management console. And it optimizes your productivity by unifying storage management tasks under one common umbrella.

Contains costs

- Central management of distributed systems reduces need for storage management resources

- Support extends to multiple storage systems, so you won't need to add storage management resources as you grow

- Ease of use cuts your training costs and enhances productivity

Responds real-time

- Real-time configuration of your storage environment lets you keep pace with evolving business needs

- Delivers reliable, real-time monitoring and notification of storage events

- Automates responses to events, reducing cost of time and processes lost to failures

Reduces risks

- Robust security ensures that configuration is done only by authorized users

- Interruptions to operations are minimized with shift paging for fault notification

The StorageWorks Command Console lets you easily configure and monitor multiple storage subsystems across your network.

More than 10 Petabytes of StorageWorks installed!

The StorageWorks Command Console is a feature rich, graphical user interface (GUI) and remote management software program for your StorageWorks products. Its distributed capabilities let you view at one time multiple servers located across your network. And its power lets you manage and control hundreds of terabytes of data from a single location.

StorageWorks Command Console at a glance

Multiplatform support

- Client support for Windows NT™ and Windows 95®, plus agent support for Windows NT, DIGITAL UNIX®, DIGITAL OpenVMS™, Solaris®, HP-UX®, AIX®, and SGI IRIX™

- Integration with ServerWORKS™

Easy to use

- Choose the look and feel of Microsoft Windows 95 Explorer or Command Line Interface

- Setup and configure with your choice of physical or logical views of your subsystem

- Failure notification via electronic mail, pager, and SNMP traps

Powerful

- Monitors up to 2.65 petabytes of stored data

- Features Quick View system health status screen, Event Logging for Windows NT, and FRU level fault detection and notification

Complete service and support

DIGITAL's worldwide service organization offers a full range of support services. Custom installation is included with StorageWorks Enterprise Storage Arrays. See the applicable software license for details on the Command Console warranty.
