OCTANE™ Workstation PCI Board Regulatory Label Instructions

This flier provides information about possible changes to your original Manufacturer's Declaration of Conformity and about any upgrade label that might be included with PCI option boards.

With each PCI option board you receive, you may get a regulatory upgrade label. If a label is included with this shipment, it may change your original Manufacturer's Declaration of Conformity. Check your Manufacturer's Declaration of Conformity at **`http://www.sgi.com/Products/compliance/index.html`** for any applicable changes to your configuration. See the *OCTANE Workstation Owner's Guide* for more regulatory information.

Look for CMNB015A on the regulatory label. This CMN number identifies the label as belonging to the OCTANE workstation. Ignore other labels with other CMN numbers; they are for other platforms.

If the label for the new board is identical to the one that is already on the workstation, you need not replace it with a new label. Place a new label on the workstation only if the CMN number is CMNB015A and the label on the workstation is not.

Check the *OCTANE PCI Module Installation Guide* or the *OCTANE Workstation Owner's Guide* for directions on where on the workstation to place the CMNB015A regulatory label.
