
OCTANE™: MXE Graphics Upgrade Instructions

Enclosed is the IRIX 6.4 Recommended/Required February 1998 CD. This CD contains patches for IRIX 6.4 operating system for Origin, Onyx2, and OCTANE systems.

If you want to upgrade your OCTANE system to the new MXE graphics, install this CD **before** installing the MXE graphics board.

Note: You must load the IRIX 6.4 Recommended/Required February 1998 CD before installing the MXE graphics board or your system will not operate correctly.

To upgrade your OCTANE system to MXE graphics, follow these steps:

1. Load the IRIX 6.4 Recommended/Required February 1998 CD .
2. Rebuild the kernel:

```
cd /  
mv /unix /unix.save  
autoconfig -vf
```
3. Shut down and power off the system
4. Remove your current graphics board and install the new MXE graphics board.
5. Power on the system and enter the *hinv* command to make sure your system recognizes the new board. It should display the following line:

```
Graphics board: EMXI
```
6. Remove the file */unix.save* once the system is running.

For any questions concerning installation or use of software, contact your authorized service provider.
