Dear Silicon Graphics Customer,

The following patch (or its successor) may be necessary when fully populating an OCTANE™ system using IRIX® 6.4 with more than 1.5 GB of memory:

Patch	Description
2881 (or its successor)	Enables memory configurations larger than 1.5 GB on OCTANE systems that recognize only up to 1.5 GB

This patch is available on software distributed with new systems and to Silicon Graphics Supportfolio customers via distributed patch set CDs. The patch can also be downloaded directly from <http://support.sgi.com>. (Note that this page requires a SurfZone ID. An ID can be created free of charge at <http://support.sgi.com/member/profile.cgi>)

If you have questions, comments, or concerns, please contact your local authorized Silicon Graphics support provider for assistance.
